

## A Red iPhone 7 Plus?

Apple is now selling the iPhone 7 and iPhone 7 Plus 128 GB model in red which they call it (Product)Red™ <http://dgit.in/red7Plus>

## Radiant Historia II

The cult-classic Japanese RPG Radiant Historia developed by Atlus is finally getting a sequel. Learn more here: <http://dgit.in/HistoriaII>

# HyperX Alloy FPS

A serious portable gaming keyboard minus the gimmicks

Price  
₹8,999

The HyperX Alloy FPS has all the basic features that one needs for typing and gaming. Backlighting is bright and different modes and brightness levels are present as well. You get to switch between 6-key rollover and full n-key rollover, with 100% anti-ghosting. A USB port is

present on the keyboard to charge your mobile devices. Do note, you won't be able to transfer data through this port. The most interesting feature about the keyboard is its portability. The cable can be detached and stuffed inside a spongy-meshed pouch (included) along with the keyboard.

After the TVS Gold keyboard, the HyperX Alloy FPS becomes the second most affordable keyboard with genuine Cherry MX switches. The keyboard supports three Cherry MX variants – Red, Brown and Blue.

In India, only the Cherry MX Blue variant is listed for now and we believe the other variants might pop up based on demand. There's not much to complain about the keyboard except the quality of the keycap stems. Poor moulding resulted in few keys getting stuck midway, but over time the edges will anyway grind away and smoothen out.

If you're looking forward to buy a mechanical keyboard for gaming, and prefer genuine Cherry MX Blue switches, then you should definitely consider this.

# Corsair Katar

Average sensor in a well-built body

The Corsair Katar has an average sensor. There are no distinct anomalies in sensor tracking and no spinning out, apart from jitter at higher CPI levels. This won't be an issue if you play at lower CPI levels around 800. Initially, we faced issues while tinkering with the Corsair Utility Engine software as the changes weren't being saved onto the mouse. Corsair is quite regular with updates, so a future firmware and software issue should resolve it.

The ambidextrous design is comfortable if you have a palm grip. And since there aren't any prominent grooves for the ring and little finger, claw grip gets uncomfortable after a while. The Katar is a really small

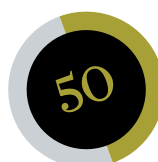

Price  
₹3,299

mouse that has a good build quality. At 85 g, the weight is ideal for FPS gamers who have a habit for lifting their mice a lot. By default, the lift off distance is high which can be and should be lowered in the software. The mouse feet are smooth and have a large surface area, so gliding is effortless. One thing to note is that there aren't any macro buttons on the mouse, not even the conventional forward and backward buttons, which could be a let down for some users. Also, there's no RGB lighting support and the lighting options in the software are limited.

The Katar is directed towards gamers who are limited to a budget. For competitive gamers, the sensor performance will only favour lower DPI users which form the majority. It is priced at ₹3,299 and you can find it for less than ₹3,000 on online stores, though it's a little difficult to find stock available at most of the places. In this price range, the only other option to look at is the Gigabyte XM300, which has a better performing sensor, RGB lighting and a more ergonomic design.
