Gamdias Ares Essential Combo

The best budget keyboard/mouse combo under ₹3k

Interactive review

Price
₹2,999

The Gamdias Ares Essential Combo (GKC6000) goes head to head against the Cooler Master Devastator II combo where the keyboard

is almost the same in terms of typing and gaming performance. It has better lighting options but the stark difference lies with the switches. The Ares Essential keyboard won't be able to give you mechanical feel offered by the Devastator II through its mem-mechanical switches. If the key switch type isn't a concern then you won't have any problem with the Ares Essential keyboard.

While the keyboard is almost the same in performance, the Gamdias Ourea mouse performs better than the Devastator II mouse by 30 per cent. The Ourea and the ASUS Cerberus both use the same A5050 sensor, so they scored almost the same in our tests. The sensor does spin out with quick flicks, which should only be a concern if you play at low DPI levels of around 800.

With just an MRP of ₹3,000, the Gaming Ares Essential Combo (GKC6000) is a great bundle if you are restricted to a tight budget. Although, if you want mem-mechanical switches, then go for the Cooler Master Devastator II.

Samsung Galaxy C9 Pro

Phablet done right

Interactive review

With 5.5-inch becoming the regular screen size for smartphones, 6-inch is the new phablet category, and the Galaxy C9 Pro is Samsung's take on it. It is also our first tryst with the Snapdragon 653 SoC, which is the "plus" version of Qualcomm's Snapdragon 652.

Samsung has used some clever engineering to optimise performance. The high power Cortex A72 cores are off at most times but Samsung turns them on during UI transitions or for animations, keeping lag at bay. It has 6 GB of RAM, to guarantee good multi-tasking. There were times when we found an app open in the background, 24 hours after we first used it.

Price
₹36,900

The best thing about the C9 Pro is its 6-inch AMOLED display. We would have preferred a QHD panel but FHD works just fine here. It's bright, with punchy and pleasantly oversaturated colours, that many prefer.

The same cannot be said of the 16MP camera on the back. While it can take decent photos in well lit situations, most other photos have more noise than is warranted. That leads to loss of detail and the phone also messes up white balance at certain times.

The device lasts a minute longer than 9 hours in the PCMark battery test. In pure comparative terms, that doesn't justify almost double the pricing, but if you do want a premium phablet, the Galaxy C9 Pro is indeed the best you can get.
