GIGABYTE AORUS AX370-GAMING 5

All aboard the Ryzen express

One of the high-end motherboards for AMD's new Ryzen processors, the GIGABYTE AORUS AX370-GAMING 5, as they name indicates has the X370 chipset. And it has a lot of customisability options which makes the GIGABYTE AORUS AX370-GAMING 5 a great motherboard for those jumping onto the Ryzen bandwagon.

There's a lot of open space around the CPU area, allowing compatibility with more aftermarket coolers and there are plenty of

₹21,100

headers to balance the power load should you go for a lot of cooling fans / pumps / controllers. Both, the RAM and the PCIe slots have metal shielding to add rigidity and we didn't find any worrisome issues with the component placement.

The audio section makes use of two ALC1220 chipsets but neither of them are shielded which seems to be a slight oversight. The BIOS has some minor issues which we expect to be ironed out in the coming months as more Ryzen CPUs hit the market and more bugs get reported. A much welcome feature is the dual BIOS and U.2 ports. It comes with plenty of accessories including multiple thermistors, a 1-year XSplit license and even an SLI bridge. Overall, the GIGABYTE AX370-GAMING 5 scores quite well in our benchmarks and we see no reason to not recommend it to be paired with an AMD Ryzen 7 1800X CPU.

Digisol DG-HR1070MSE 4G Mi-Fi Portable Broadband Router

An upgrade in some aspects

Reliance Jio's disruptive strategies have caused a huge demand for portable Mi-Fi routers. We tested the Digisol HR-1070MSE against

the new Reliance JioFi 4G Hotspot that costs ₹1,999. Indoors, the Digisol HR-1070MSE managed to channel 15.88 / 1.90 Mbps on uplink/downlink and outdoors this jumped to 19.97 / 9.56 Mbps. When the JioFi 4G Hotspot was tested

Price
₹4,500

at the exact same locations, the indoor speeds were at 15.46 / 3.44 Mbps and the outdoor speeds were 23.53 / 9.48 Mbps.

The Digisol HR-1070MSE is an upgrade over the older HR-1070MS in terms of compatibility with more LTE bands, however, the battery capacity has been reduced from 2800 mAh to 2000 mAh. We saw the internals of the device to be quite well built. Also, we'd have liked to see the power and WPS buttons to have been either flush with the surface or better yet, slightly recessed to avoid accidental presses. Performance wise, the decision to modify the modem and drop TDD uplink speeds does bottleneck the device. The huge price tag of ₹4,500 certainly can drive away customers as the Reliance JioFi 4G Hotspot with its severely subsidised price tag of ₹1,999 is a more attractive buy.
