OUR PICK OF THE BEST TECH ARTICLES FROM AROUND THE GLOBE

(MUST READS)

COMPUTING ON THE EDGE

Major tech companies like Intel, Nvidia and Qualcomm all see connected cars as essentially 'the' computing device of the next decade or so, just as smartphones have been for the last decade. Is the future of advanced-edge computing really in autonomous cars?

WHO ACTUALLY BUILT THE ANCIENT SILK ROADS?

The Silk Road was a series of ancient trading routes that spanned Asia, reaching as far as the Middle East and Europe. But according to anthropologist Michael Frachetti and his colleagues, previous studies used the wrong algorithm and missed an obvious hypothesis.

ORIGINS OF CONVERSATIONAL INTERFACE

Its 2017, and conversational interfaces/machines are everywhere. It feels like we may spend more time talking to computers than to one another in just a few short years. But how did we get to this point? Where did the conversational interface initially originate?

BEGINNER'S GUIDE TO EXTRATERRESTRIAL POST-DETECTION ETIQUETTE.

SETI researchers think there is a good chance we'll be hearing from ET within two decades. This possibility of contact seems closer today than ever before thanks to recent forward leaps in alien-hunting technology. But it also raises the question: You've just been contacted by aliens, now what? <http://dgit.in/talkET>

How do MIDI drawings even work?

Musical Instrument Digital Interface mainly known as MIDI is a digital protocol that allows digital musical instruments and tools to communicate with each other. MIDI drawing is basically making computer music while 'drawing' a sketch using MIDI notes.

What's wrong with fossil fuel subsidies?

The World is wasting trillions of dollars on fossil fuels. Government subsidies lowers the cost of production, raises the price for producers, and lowers the price to energy consumers. Essentially, it rigs the game in favor of fossil fuels compared to other energy sources.
