✉ I have been reading dmystify since the past year and a half and I would like to tell you that I have found it quite intriguing and informative.

The things which I came to know from reading various other books were all present in your book, that too in a very simplified way which is very good. I hold off reading other books but I never miss dmystify.

I am sorry I never mailed you earlier to praise dmystify but this month's dmystify on microscopic life lacked a chapter on viruses. Everything was discussed other than viruses. Unless, you're planning to bring out a dmystify entirely on the same.

—Prakhar Vignesh
(Virus Lover)

4 Indeed, we are contemplating a dmystify dedicated to virii, because they are complex and very, very different from everything else. We haven't set a date for it yet, though, because we plan these things much in advance, but let me see if it can be moved up to appear sometime this year.

—Robert

✉ Hello Digit, I've been a bit sad – you guys kinda killed SKOAR!. The jewel in Digit's mighty crown is now stuffed somewhere inside the main mag and to make us feel the difference between the main mag and SKOAR, you also degraded its quality. I'll be very happy if SKOAR! rises back again from the ashes of the Phoenix!

Lemme tell you that cover story on AI was great. I believe that AI will surely arrive soon, and probably do all the work for me (am I too greedy?). They'll be the slave and I have a valid reason for making them slaves. They have intelligence. So, at some point of time, they will have a feeling, that they should be the one who is superior. This has been happening since forever in our human race. The AI race won't be any different I guess. We'll need to have control over them. The reviews you guys do and the comparisons are epic. I remember when you did a comparison of smartphone cameras, the table was two pages long, and the

Feedback for the April 2017 issue of Digit

GPU comparison table was four pages. You people give attention to so much detail, that you can rate a smartphone game on ten, and even correct to a decimal place! (I've never seen decimal level rating on smartphone games).

PS. The Tekken 7 poster was great!

—Snehit Sab

4 Don't worry Snehit, SKOAR isn't dead. We have great plans for it. Stay tuned. But your plans for AI have scared us! Yes we do have detailed test processes and we test every minute detail. But Anusha, (who reviews mobile games) I suspect just likes decimals :-P

—Siddharth

✉ Hey there! I've been wanting to write to Digit since a long time now, so this one's going to be a bit lengthy.

I had my board exams during the latter half of March, so I was expecting a lot from your March '17 issue, in order to take off the pressure during study time. But I was utterly disappointed. Almost nothing in the mag had my interest, except SKOAR and FastTrack. And after the exams ended, I was expecting even more from the April issue and boy, did you deliver. This time almost everything in the mag captured my interest – from

the cover story to dmystify.

Overall it was one of the best issues I've laid my hands on.

The April '17 issue saw the introduction of a different paper quality which is of inferior quality similar to cheap paper cum plastic pamphlets. So, I would like you to revert back to the previous one.

As far as the Digit app is concerned, don't you think that handing out free Digit e-books would encourage piracy! As someone would surely put up a link (or upload it). And in no time we would see PDF versions of Digit, shamelessly stolen (Hey! I'm not the one btw).

And why don't you include Mithun's column in the introductory pages? (with Sid and Robert). It may result in the formation of a new "Trinity Brotherhood".

I also have some suggestions for the upcoming issues. How about a Cover Story on "Becoming hack proof" or "The future of the PC Master Race"? I would love to see a comparison of mid-range GPUs. For SKOAR, how about covering Metal Gear Solid or Resident Evil for the "Phranchise" section? I'm not sure whether it's done but a FastTrack on "Building a PC" will be great? A dmystify on Nanotechnology is something I'm expecting from you. Also, you receive tonnes of games and gadgets. So, why don't you organise
