

1080p at 60fps stream

Streaming platform, Twitch, has dropped their 3.5 MB bitrate limit – meaning, you can now stream in 1080p at 60fps. <http://dgit.in/twitchUG>

3D-printing aeroplanes

Boeing to make 3D-printed structural titanium parts for its 787 Dreamliner which will save them \$3M on each plane. <http://dgit.in/3DplanesB>

Inbox

giveaways? I guess everyone would love to receive gifts from the #1 tech magazine of the WORLD, especially me. Finally, a Prey or Outlast 2 poster would be highly appreciated. Thank you for enlightening readers like me and also for delivering such great content every month. Keep up the good work team :)

–Sarang Devsaba

d Phew, you weren't kidding when you said it's going to be long one. But these detailed letters are the ones we appreciate the most. And hopefully my reply will be equally detailed and long. Excellent suggestions Sarang, and we're glad you liked the AI issue. Let me answer your queries one by one.

The paper quality is to differentiate SKOAR as a separate section from the rest of the magazine. We've been getting conflicting reactions to the paper quality. If you read ahead in this section a fellow reader is appreciating the low reflective glare on those pages.

About the app, yes piracy could be a concern, except the app doesn't host PDFs at all (which is why the reading experience, we hope, is much better). As for past issue PDFs, we anyway give them out twice a year on the special issue DVDs.

There seems to be a lot of demand to have Mithun's column moved up! Since Mithun is always knee deep in components, it just felt natural for his column to be where all the hardware is – the Tried & Tested section. But it's a great

idea to establish a new "Trinity Brotherhood" as you put it. (Just don't tell him I said so. Shhh.)

A blowout GPU comparison test is something we've been planning for a while too. The only thing keeping us from doing it is our wait for AMD's VEGA cards. Once they're out, we'll be coming up with a comparison test covering not only the mid-range but all the categories. So stay tuned for that.

The ideas for future phranchise, and dmystify are spot on. Though we did PC Building in September 2013. It might be time for a refresh but the basic principles still remain the same. Do dig into your PDF archives and look up that issue.

Happy reading!

–Siddharth

LETTER OF THE MONTH

☒ Hi, I've been an on-off reader of Digit for what seems like eons. There are a lot of positive things, but I have a feeling this is going to be a rather long mail, and think the negatives need to be addressed first. So here's my two satoshis:

1. I open the familiar two page Inbox section that lists the praises and woes by users. A quick scan and not getting what I came for, begin to flip backwards. Finding out where to write to you guys was an elusive piece of information to find! A simple blurb somewhere on same page along the lines of "write to x to let us know" would've done wonders in streamlining the process without having the reader to hunt it down.
2. Whats up with the Tips & Tricks page format? In this era who actually cuts and "files" them. I understand it made sense when internet was a challenge and those dual DVDs were a gift from the gods. It's time to update that column I think. Give it page numbers and "normalise" it.
3. Readability. Oh god! the ever fighting battle of designers! While I'm pleased to say that it's kept a great design throughout, in spite of the overwhelming content, some sore spots remain. Take the AI story last month – the circuit pattern underneath is still hugely distracting and often comes in the way of the text.
4. Readability again (hides under a blanket). The whole Sci-fi TRAPPIST story on Page 53. You see on glossy pages when printed with black ink as the background, pretty much every light source is a messy reflection of white thou-shalt-not-read blinding spell. This is fine on non glossy paper (like the SKOAR story on page 84) which are printed using

the same colour. They barely reflect anything.

5. In most cases I find the magazine content quite noob friendly, and understand that it's a fine balance to maintain. I have some mixed feelings about one aspect of the AI stories. The turing test is mentioned in quite a few places and is integral to the topic of AI. However nothing was mentioned about what it was really. The jargon was thrown around like it was a technical test and a casual reader who is reading about AI for the first time is going to think it's some "computer thingy" that programmers do.
6. Officially a fan of Sahil Dawka after that refreshing 2040 short story. Looking forward to more such creative stuff. :)

–Sony Sasankan

d Yikes! I had no idea finding out how to reach us was so difficult. Feedback noted Sony, you'll find a big blub in this section itself going forward.

We've toyed with the idea of normalising the section too. But every now and then we get a stray mail from readers like yourself who crib to us when we don't start the section on a right hand page (like this time) because they want to cut those pages and not disrupt whatever might be printed behind. But yes point noted. We'll add this to our next reader survey.

Yup that's on us. I don't know how we missed that. We hope the readability in this issue is better.

Indeed, we should definitely put in "for those who came in late" explainers in our stories. Point noted.

Keep sharing such feedback with us Sony. It helps us improve a lot.

–Siddharth
