

> GREED

For those who just want more than should be humanly allowed, we have enough to satisfy your hunger...

THIS MONTH: Mini Cooper D, BMW X3, Bang & Olufsen BeoSound Shape, OSIM uCaress 3D, Hidesign RFID blocking wallet and more...

> TEMPTATION

If you're wondering what to do with yourself or how to spend some time getting cultured, this section is for you...

THIS MONTH: Expanse, Born a Crime: Stories from a South African Childhood and upcoming stuff to watch out for in May 2017 ...

DESIRE > SHOWCASE

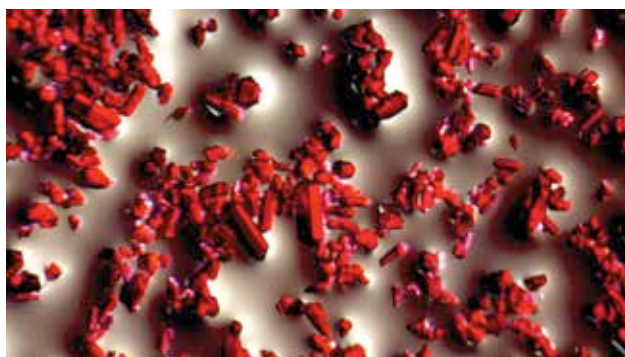

MindMaze VR Face Mask

MindMaze has come up with a mask that's capable of somewhat accurately reading your expressions. The mask consists of a ring of electrodes which you can install into the face foam of any VR headset. When you put the mask on, it detects which sensors your skin is touching, matching it to patterns of facial expressions. It's not 100 percent accurate, but it helps read expressions when your face is otherwise hidden by a VR headset.

Solar-Powered Water Harvester

This sponge-like device is capable of sucking water out from water vapour in the air, even in low humidity conditions. It can produce about three litres of water a day for every sponge-like absorber it contains, and researchers say that it can only get more efficient in the future. In the past, researchers have been able to acquire water from the atmosphere but never like this. Previous methods needed either too much electricity or areas of very high humidity. The team of researchers from the University of California, Berkeley, led by Omar Yaghi, found a way to use crystalline powders called metal organic

frameworks, or MOFs. These MOFs' properties can be altered by chemists, dictating which gases bound them and the strength of their bond. In 2014, they synthesised a MOF that was adept at absorbing water, even in low-humidity. After synthesizing the new MOF (dubbed MOF-801), Yaghi reached out to Evelyn

Wang from MIT and together they came up with the water-harvesting device. The device works by soaking up water vapour from the air at night, and using heat from the sun to condense the vapour to liquid during the day. This could be a huge breakthrough for places that suffer from drought.

Lego Mac

Although it doesn't run macOS, this tiny Lego Mac

is made out of an e-ink display and a Raspberry Pi Zero. All it can do is display the time or images on the e-ink screen.

SHFT IQ

SHFT IQ is a virtual running coach that tracks and

analyses your body and running style. This tiny pod is armed with an AI that can provide you with instructions in real time.

X-Wing Drone

If you're looking for drones that resemble

spaceships from Star Wars, Oliver C is your man. The latest addition is the iconic X-Wing fighter; completely custom-built.

Aerix Nano FPV drone

These nano drones feature

a 5.8ghz video camera along with a 2-in-1 FPV standalone monitor and goggle set for some first-person-view drone racing action.
