

DESIRE

MOBILE WATCH

Stylish, glamorous and interesting smartphones are always on the horizon. We take a closer look at what's hot in this space...

Onkyo Granbeat

Onkyo is Japan's leading manufacturer when it comes to all things audio. It's Japan's answer to companies like JBL, Bang & Olufsen, and Harmon Kardon when it comes to high end audio equipment. While these companies have been known to partner with phone companies to lend their expertise in smartphone audio development, Onkyo is taking it a step further. Onkyo has gone ahead and developed its own smartphone, the Onkyo Granbeat. The focus of the Granbeat is of course on the audio, and Onkyo claim it has the "highest quality of audio in the history of smartphones." The Granbeat comes with a standard 3.5mm audio jack and a 2.5mm 4 pole jack. It's also got dual amplifiers, making it the first phone in the world to have those. The DAC and amplifier circuit are shielded in an enclosure that prevents electromagnetic interference. The Granbeat's body is made from a single aluminium block. There's a dedicated volume control knob on the left and player controls on the right side.

APP WATCH

Tapzo

Tapzo is an app that integrates all of it – cabs, food, bills, news – under one app. We don't need to tell you how useful that could be, right? Especially when phones are running out of storage space as rapidly as the blink of an eye, if you could actually save space by installing one app instead of say, 7 or 8, that immediately makes the app a must-have. For now, Tapzo has partnered with Uber, Ola (the two cab biggies), Swiggy, Zomato (the two food biggies), BillDesk, MySmartPrice, Airtel Money, Redbus, Cleartrip, Bookmyshow, Freecharge, Mobikwik and more. Needless to say, this covers a really broad spectrum of services from reliable service providers all under the roof of one single app.

NowFloats Boost

NowFloats Boost is a service that offers to give your business visibility by providing you tools to build your own website. Above the usual social media presence, NowFloats promises to get your website – and consequently, product – visible in unique search results. Overall, the appearance of the website is pretty standard. In fact, any NowFloats Boost free website looks pretty much the same. But the important

thing here is the visibility – most customers of this app are small to medium stores who have used the app to get regular service and product updates out to their customers. The only thing it insists on – regular updates.

Google Areo

Hyperlocal services are picking up pace and now Google seems to have taken up the job of integrating them with its new app Areo. Currently operational in Bangalore and Mumbai, the app brings together quite a few services. For instance, food services like Freshmenu and Holachef, home services from Urbanclap, and more. A great

feature is integrated checkout that shows you all the services and items in your cart in one place.
