

GREED

EXAMINED

Some very cool products come to the Digit Test Centre which don't really fit into the standard product categories that we review in the Bazaar section. We write about them here mostly to make you turn green with envy.

OSIM uCaress 3D

You can call it a 3D back massager or you can call it a back pulveriser because that's what it did to us. Unable to get over the loss of the previous foot massager to grace our test labs, we were ridiculously giddy to give the OSIM uCaress 3D a try. It's got a beige-brown colour palette which goes with everything and there's even a velcro strap to tie it up with the backrest. The magical massaging is brought on by these two rollers that knead your back so well that even your chromosomes will get untangled.

It's got multiple modes which not only switch between the different kneading patterns but also mix things up with focused massages. Maybe you've spent a little too much time slouched over your phone and pulled a neck muscle. Worry not, pick the 'Neck & Shoulders' preset and wail away in agony as the massager sets you right. We spent quite a lot of time on the

uCaress 3D, a little too much, to be truthful. The device warns you against overusing it but we went ahead and tried everything in one go, from getting lathi-charged thanks to the kneading massage to falling asleep thanks to the relaxing multi-action full-back massage. And should you need something extra (no pun intended) then turn on the heat and you should be in heaven. What we can say is that while it isn't the same as a comfy sofa massager, it is pretty much the same in efficacy.

SPECIFICATIONS

Weight: 6 kg | **Dimensions:** 75 x 16 x 42 cms |
Massage presets: 4 | **Power:** 120-240 V AC mains.
Price: ₹22,000/-

Zebronics Zeb-Fit500

After the Zebfit-100 launched last year in October 2016, Zebronics recently launched an upgraded version of its basic tracker with the Zebfit 500. The new activity tracker contains a lot of standard features that were already there in the Zebfit 100, like a 1.24cm OLED display, seven day data storage, 15 days and above standby time, caller ID, notifications, remote camera shutter, with almost identical dimensions and weight. In addition to that, the new tracker also contains a heart rate monitor and a touch sensitive button.

The Zebfit delivers on what it promises – except with the actual step tracking. The tracker detects

quite a few false steps and you might find your daily goal completed way sooner than you thought it would. The heart rate sensor is a good addition, and it works on an always-on mode. The sleep detection could use some work as in a couple of occasions, it could not detect interrupted sleep and ignored the hours before the interruption altogether. The wrist-activation feature worked every single time we tried, so that's a plus. Overall, at ₹4,000 the Zebfit 500 does carry little more than what its competitors carry at half the price.
