

Crusaders CF-100

With the air pollution breaking quality standards (in a bad way) in the capital, air purifiers are now becoming mainstream. Soon to join them are air purifiers for cars and we got to play around with the Crusaders CF-100. The CF-100 is a

scaled down version of a regular air purifier while maintaining the same mechanism of purification. Packed with an active Carbon filter and HEPA filter (capable of preventing the passage of particles the size of 0.3 microns), it can purify an area of 60-70 sq. ft. which is more than enough for a car. Running on a rechargeable Li-ion battery, we found the purifier to last for up to three hours in a single charge. There are two fan speeds that can be switched based on your requirement. The CF-100 is almost the size of a bottle and quite

lightweight. It can also be placed on your desk or cubicle, and it will be able to remove odour as well, thanks to the five physical filters placed inside the two vents. Clean and filtered air is blown out through the top vent. Although the CF-100 is expensive for its price of Rs. 5,000, it could be a worthy investment as a portable air purifier to use in your car and office cubicle.

SPECIFICATIONS

Air Flow: 15 M3/hr | **HEPA Filtration:** 0.3 micron @99.97% | **Filter Replacement:** After 12 Months (Avg. use of 6 - 7 hours every day) | **Inbuilt Sensors:** Odour sensor | **Dust Purifying Rate:** >99.97% | **Formaldehyde Purifying Rate:** >96.2% | **Germ purifying Rate:** >97.6% | **Display Mode:** LED | **Rated Voltage:** DC12V | **Negative Ions:** >5,000,000/cc | **UV Light Lamp life:** 20,000h | **Applicable Area Max.:** Up to 15 M2

Hidesign RFID blocking Wallet

Getting that snazzy new wallet might be good to bump your style quotient up but it's not going to protect you from hackers trying to steal your credit and debit card data. RFID sniffing is the fad among hackers (or should we call them pickpockets?) these days. All they need to do is carry around a high-power RFID reader in their backpack while walking down the streets. Current gen RFID readers can copy your data from a few feet away and you won't even notice it before it's too late (i.e. When you start getting SMSes for unknown transactions). Unless you get one of these RFID blocking wallets.

We tried out the Hidesign RFID blocking wallet and it works!

(What else were you expecting to hear?) The secret lies in a wire-mesh lining that blocks radio frequency pulses from even getting to the RFID tags. Of course, we didn't have any high-power transceivers so we can't say what a determined thief can get but your average rookie hacker isn't going to be able to sniff your debit cards from afar. Sure you can stuff a layer of aluminium foil inside your current wallet and get the job done. But will it be stylish as this Hidesign wallet? It's got 15 slots for plastic money, two for paper money and a few pouches for ID. It's stylish, has plenty of slots and even protects your money from digital pickpockets. What else do you want from your wallet?

SPECIFICATIONS

Length: 10 cms | **Height:** 12 cms | **Credit/Debit card slots:** 15 | **Money slots:** 2 | **Windowed slots:** 1 | **Misc. Slots:** 2. **Price:** ₹1795/-

Belkin Universal Car Charger

Belkin's Universal charger ensures that it's all you'll ever need for your charging needs on the go. It works with just about every device in the market right now, equipped with a USB 2.0 port. It isn't too bulky and is rather sleek in design. Furthermore, the device comes with voltage-sensing built-in, so you don't need to worry about power spikes or other such surges damaging your device. They're pretty serious about that too, offering a warranty of \$2,500 if your device is damaged by a rogue electrical charge.

SPECIFICATIONS

10 Watt/2.1 Amp | **Universal USB 2.0 Port** | **Compatible with most devices** | **Price:** ₹999/-
