

TEMPTATION

CRITIQUE

In this section, we put stuff through the grinder and closely examine what comes out; everything except gadgets, because there's more to life than just that

BOOK

Born a Crime

Born a Crime is the kind of book that will take you on a rollercoaster ride of emotions from the first few pages. The now famous Late Show host stunningly captures in visceral detail, what it was like growing up in post-apartheid South Africa. The discrimination,

the poverty, the struggle, the camaraderie of children, the hatred of adults – it's a first hand glimpse into the history of a country that was until not too long ago mired in institutionalised racial segregation. This is a story of early '90s South Africa told from the point of view of a child who was, technically, brought into the world as the result of a crime. By law his white father and black mother were not allowed to have relations.

The stories range from lighthearted incidents full of colloquial hilarity to gut wrenching accounts of racism. Strangely some anecdotes are relatable to any 90s born middle-class Indian kid – a trip down memory lane is unavoidable.

TV SHOW

Expanse

If there is one problem with quite a few science fiction shows and movies – it is the major disregard towards anything actually following the rules of science. Based on the highly acclaimed novel series by James S.A. Corey, Expanse makes it quite clear at the start that it takes its science seriously. Be it gravity serums for space travellers, or the impossibility of high-risk maneuvers in space, all of it makes sense if you're reasonably up to date with the world of scientific research.

The show is based in a future where we have successfully overpopulated Earth, colonised the Moon, have begun terraforming Mars in glass biomes and have managed to push the lower stratas of the society to the asteroid belt in our system. So yeah, future – but not Star Trek yet. Starting off as a

simple missing person and a missing freighter case, the show quickly takes unexpected turns to dive deep into interplanetary dynamics. What makes the show more interesting is the drama and conflict shown between Earth, Mars and 'Belters', which gives it a similar vibe to Game of Thrones.

And if anything is being compared to Game of Thrones, how can it not have an amazing cast? Everyone from Shohreh Aghdashloo to Thomas Jane have done a brilliant job in portraying a human race that is used to an interplanetary life, but isn't quite at the best terms with it. Sounds familiar, eh?

It only seems fair to say that Expanse will initially take its time, but once you are hooked, you'll need a hyperdrive to let go.

Guardians of the Galaxy Vol. 2
Marvel's trailer game is strong. They've got the whole world hyped for Guardians of the Galaxy Vol. 2 and baby Groot. We're really hoping this one is as good, if not better than the first one.
Release date:
May 5, 2017

Prey
We've seen some pretty bizarre things in Arkane Studio's upcoming first-person action-adventure title Prey. The game literally lets you turn into a mug, among other things. Well, there are places only mugs can reach...

Pirates of the Caribbean: Dead Men Tell No Tales
Never thought we'd be seeing another one of these but here we are, six years later. Here's hoping that Dead Men Tell No Tales doesn't spell doom for this beloved franchise.
