

Floating apps?

If you think you can't multi-task on your phone, think again. There are apps that will help you do two or more things at once on your phone. Learn all about it at

<http://dgit.in/FIApps>

the usb grabber video connector (yellow).

8. Connect the USB grabber on the other port of the Raspberry Pi as it draws more power.

POWER UP THE RASPBERRY PI AND SETUP THE WI-FI IN THE OSMC

1. Navigate to Programs > My OSMC
2. In the setup menu you can configure the network settings and select wireless, From the list of available networks select your network and configure it to connect to the network.

This configures the KODI media player and lets us stream content onto the screen.

Note: the IP address of the PI on the network, we will need it later.

CONFIGURING HYPERION

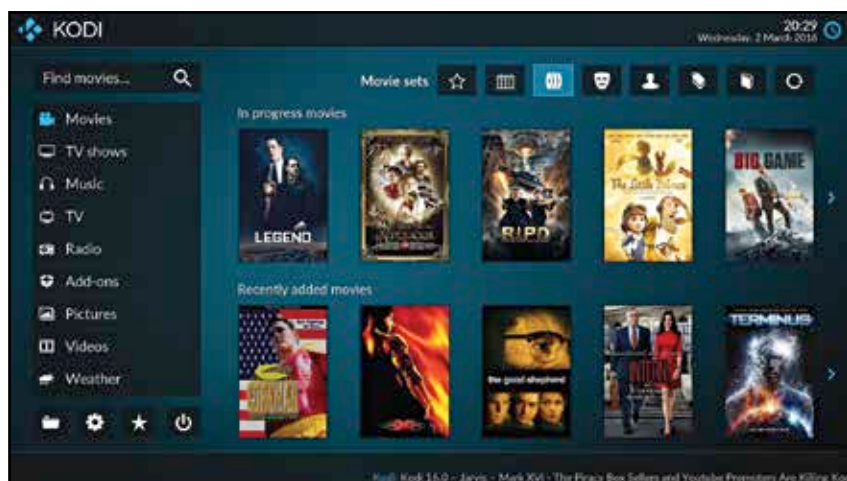

1. Run Hypercon.jar
2. In the Hardware Tab configure these:

- Type : adalight
 - Output : /dev/ttyUSB0 (need to check the usb number if this doesn't work)
 - Baud rate: 500000 (from the arduino sketch)
 - Direction : Clockwise
 - Select the left, right, horizontal, offset to match your setup from the table we noted above.
3. Click Save
 4. Make sure that the correct usb device is selected for the usb grabber in the grabber tab.
 5. Now under the External Tab make the setup as shown and click Save
 6. Now Click on "Create Hyperion Configuration" and save this.

FINAL STEPS

1. Go to the SSH tab
2. Enter the IP address of the PI in the Target IP field
3. Make sure Port is 22
4. Enter username as osmc password as osmc (if you haven't changed the default settings.)
5. Click Save
6. Click Connect and you should connect to your PI
7. Then click "Send Config" and wait for it to Upload
8. Click Save
9. Click save hyperion file, will help in later use
10. Reboot your PI

If everything has gone well your Ambilight setup should now be working with your TV!

The KODI media player is a great option for staying up to date with the latest and best shows.

STREAM EVERYTHING!

With high speed broadband and decent FUPs becoming commonplace, the days of downloading content are long gone. Be it your favorite TV shows, movies or your entire music collection, streaming is the way to go. And there are tons of ways to do it as well. For example, Plex is a popular solution for sharing media over a local network.

Although there are features behind certain paid subscriptions, there are also free alternatives that work just as well. As an intelligent server software Sonarr is pretty much all you'd need. Whereas Sickrage, a fork of the Sonarr alternative Sickbeard, also covers pretty much the same things in a much more organised and sleek way. Head over to our ultimate streaming guide at <http://dgit.in/AllStreaming> to sort out pretty much all of your streaming needs.

AUTOMATE YOUR HOME

Even though IoT devices have been quite popular globally over the last few years, it is only recently that India

The Oakter kits are pretty easy to use

has seen consumer grade IoT devices show up in its markets. And with these devices you can customise your humble abode or grand palace to be smarter and respond to your needs much better.

Take the Oakter home automation kits, for example. Comprising of smart switches and a central hub, it's an easy to use plug-and-play solution that works seamlessly with its mobile app. You can use it for pretty much any device that requires a plug-point and needs to be controlled remotely. It features scheduling as well.

Check out our detailed feature at <http://dgit.in/HomeAutom> which covers multiple aspects to get started with automating your home.
