DLL errors are here to haunt us again

Broken HDDs can break our hearts, so can other gadget related problems that we explore this month.

DLL panic

Hello Digit,

Whenever I start my computer, I get the following in an error windows:

"MSVCP100.DLL missing"

This annoys me a lot. Because of this error, I'm not able to install the EyeLeo software and Mailbird. Please help me out.

– Gaurav Kumar

 Hey Gaurav,

We all know the pain of dll file errors. There can be several reasons leading to the MSVCP100.DLL error. It could be a malware or virus, a Windows registry error or rarely a hardware failure. The best solution would be to run a virus scan and also a malware scan. Then you should download and install all the latest Windows updates. Perform a registry clean up and then reinstall the software you were trying to use. If the problem still persists then you should try a system restore if you have a restore point saved. Pro tip: it's always a great idea to have one saved. Otherwise you can insert your Windows installation DVD or USB drive and repair the system. If nothing works at all, we're afraid that you'll have to install a fresh copy of Windows.

Failed Kindle login

Sir, I'm a regular subscriber of Digit since a long time. I've a OnePlus One phone and I was going along with it nicely. Recently, the screen got locked accidentally and I couldn't open it and I had to format it with someone's help. Since I had a Google backup I got back most of the data. My problem is I had downloaded several books from the Amazon Kindle store and I'm also a sub-

scriber of Kindle Unlimited. After downloading the Kindle app, as I'm trying to register myself it says they don't have any account with that email ID. I've tried with all of my email IDs but the result was same. I'm afraid if I try to register a new account I might lose all my books and my Kindle Unlimited subscription. Please help me get back my books and my subscription as well.

Thanking you,

– Chanchal Kumar Das.

 Hello Chanchal,

This is a really weird issue and none of us have ever come across this problem. Your email ID on Amazon India (Amazon.in) is the same for all their properties including their shopping website, Prime Video, Kindle store or Audible. So essentially, if you are able to log in onto any of these services with one particular ID, the same ID should be functional on all of them seamlessly. If you had registered for Kindle Unlimited on Amazon.com, then your email ID will be different. You need to verify which email is associated to account and then try logging in again. If nothing works out, then you should contact Amazon support before you register any new account. If you have everything in email – your Amazon Kindle Unlimited subscription invoice – then you shouldn't have any problem.

Broken HDD

Hi Digit, my HDD (Seagate st2000dm001) suddenly stopped working. It starts spinning, makes some reading noise (actuator moves the head back and forth) and stops spinning. I want to get it repaired so that I can recover its data, I have several data

recovery software that can recover from even volume corruption. But I want the hard drive to be recognised on my PC.

How can I repair my HDD mechanically? Where can I take it to in Kolkata? I don't want data recovery services, I want repairing. I can recover once it's recognised by a PC. Please help.

Regards.

– Tirtha Chakraborty

 Hi Tirtha, this is surely a mechanical problem but you should try using a different SATA power and cables and also different SATA ports to verify the problem. Repairing a hard drive can be quite expensive and we would recommend you to contact Seagate service centre for official support. There are four service centres in Kolkata that you can contact.

Android games with an Xbox 360 controller

Hello guys, I have a Redmi Note 3 (3GB RAM, 32GB storage). I want to play games with my controller on my phone. I have an Xbox 360 wireless controller, wireless receiver, and an OTG cable. But it is not working. I have watched many YouTube videos where they are playing games with the controller. Please help me. You are my last hope.
