Q&A

A Hey Gagnesh, the process is pretty straightforward and you shouldn't face any problem. Make sure that your wireless receiver works on the Xbox 360 in the first place. Connecting the controller to your phone is just like connecting an input device and shouldn't require any configuration. Try to use it in the wired mode as well. Another thing you should remember is that not all Android games support gamepad controls, so make sure you're trying it out on compatible games only. Without proper support, the controller might behave unpredictably within the game. The videos explaining this process are more than enough to help you out.

Q Is it big enough?

Hello team Digit, below is the specs of my rig:

- Processor: Intel Core i5 4440
- RAM: 8GB DDR3 (2x4GB),
- Motherboard: Gigabyte H81m-s1

My cabinet is the iBall Piano 414 which is in fact a compact cabinet. I am

willing to buy the ASUS Strix RX 470 but I have a painful thought. Will it fit in my cabinet? I am tight in my budget so any advice of modification in the cabinet itself will do me good if the card normally doesn't fit. Kindly help!

– Rick

A Hey Rick, the cabinet is quite old and we couldn't find the specs mentioning the maximum supported GPU length. What we do know is the length of the Strix RX 470, which is around 240mm. Sometimes the most basic equipment is the most useful. You should verify with a measuring tape or scale whether it can fit the cabinet. If it doesn't then you can try to remove the riveted HDD or ODD cage that will clear out some space to accommodate your GPU. And you can always make it your own in this process.

Q Infamous error 10

Hey Digit,

I need your help. My internet isn't working. Until the last boot, it was working but when I tried to access it one day after that, it is showing an error in the LAN device – Error Code 10. I have tried reinstalling the driver from the motherboard DVD as well as from the ASUS website. But the error persists. Please help me.

PC Configuration:

- Intel Core i5-3330
- 4GB RAM
- OS: Windows 8.1 Pro 64-bit
- Motherboard: ASUS H61M-K

– Shashwat Gupta

A Hey Shashwat, error 10 is a sign of failed hardware. This is caused because of either outdated software or maybe the device got corrupted. Now, as a first measure, you should rollback the drivers to an earlier version by going to Device Manager and right clicking on the Ethernet device, disabling and rolling back. If a previous version of the software was operational then rolling back should do that trick. You can then install the latest update of the drivers from the website and the warning icon should go away. Usually, these updates take care of any such errors. You can also try to uninstall the driver if it doesn't work, but if it was working fine earlier, then rolling back should be fine. And with either of these options your internet connectivity issue should be solved for good.

Element of Success

Add a little attitude to all your presentations with iBall's 2.4GHz Wireless Presenter. Probably the most powerful presentation tool an executive will ever hold!

- 2.4GHz Wireless Trackball presenter device
- 6 Button with built-in laser pointer
- USB Micro receiver
- Use as mouse with Trackball & Left click button
- Left & Right button for previous or next slide
- On/Off switch to save battery life
