Conflict detector wearable?

Several researchers join forces for a study aimed to detect conflict in couples before it occurs using wearable technology. <http://digit.in/Conflictwear>

ZOTAC GeForce GTX 1080 Ti AMP! Extreme

To 'Ti'de you over till Volta comes along

Price
₹70,999
(+Tax)

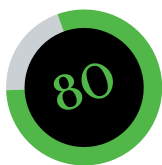

You might be miffed at seeing two NVIDIA flagships coming out back to back but the GTX 1080 Ti sure is a beast. The ZOTAC GeForce GTX 1080 sports the highest clocks that we've seen on any 1080 Ti that have graced our Test Centre with a base clock of 1645 MHz and boost clock of 1759 MHz. And unlike the current trend of forcing you

to switch between profiles using a separate software, ZOTAC has gone ahead and dropped multiple profiles. So you get the best performing profile out of the box.

Coming to the build quality, the card is protected from all fronts thanks to the protective backplate that extends over the sides. ZOTAC's Spectra lighting has improved since we last checked it out and now supports the full RGB spectrum. But we're still not fans (see what we did there?) of the 2.5 slot thickness. We also noticed the FireStorm software acting up during testing but were assured that a fix would have been released soon. Performance wise, it has been the fastest with most games running at greater than 60 FPS in our test suite. And the overclock helps out since we did clock 8 extra FPS in Rise of the Tomb Raider over the reference GTX 1080 Ti. It is a little pricier than the competition but you get five years warranty which is also greater than the competition.

Moto G5

Dependable, but not the best

The Moto G5 is a good overall smartphone, and has something to offer for everyone. It isn't the most well-built smartphone, but is definitely one of the most ergonomic. It doesn't have the most vibrant display to consume content, but isn't bad either. The display is visible in the sun, and everyday performance is acceptable. The built-in speaker isn't loud and if you want to watch content, we suggest using headphones. The 16GB storage is a downer too. We do not recommend anyone to buy a phone with 16GB storage, unless all you need is calling, basic messaging apps and internet access. Heavy games showed some framerate issues, but the games were still playable. For well lit situations, the

Price
₹11,999

camera clicks good photos producing decent colours and overall details. Having said that, there are times when the colour accuracy is off, with warm colours looking undersaturated.

If extra long battery life is a priority, you can consider the Xiaomi Redmi Note 4 or even the Redmi 3s. If a good camera is what you are looking for, the Honor 6X is your pick, while the Redmi Note 4 is the one for those who demand performance. The Moto G5, meanwhile, is for those looking for an ergonomic smartphone that is dependable on everyday basis. It's compact, has decent battery stamina, offers stock-like Android interface and has an aura of assurance. It isn't the best smartphone at around 10k, but is one that you can depend on as per need.
