

Final Fantasy on Netflix

Final Fantasy 14: Daddy of Light, a TV show based on the game is premiering worldwide on Netflix this fall. <http://dgit.in/FF14netflix>

Drinking sea water

You may soon be able to drink seawater using a graphene oxide-based filter thanks to a team of scientists. <http://dgit.in/DrinkSea>

GIGABYTE AORUS GeForce GTX 1080 Ti 11G

A little extra dose of copper on the back

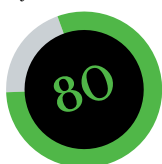

Price
₹NA

It's not just the branding that's new with the GIGABYTE AORUS GeForce GTX 1080 Ti 11G, they've made some interesting changes with the cooler design as well. For starters, they've added a copper block right behind the GPU which is supposed to help with the cooling. Then there's the copper base plate for the main cooling assembly which has been

made much bigger than before. Except, the one on the front actually makes a difference. This card too takes up 2.5 slots which is a bummer. This unit has GIGABYTE's VR link feature which puts an HDMI port on the front of the card but the box does not contain the 3.5-inch drive bay dock for making use of the VR Link feature. So that's an additional purchase you'll have to make to use the feature. As for the VRM circuitry, it has a 12+2 power phase design, which helps in maintaining high overlocks.

Performance wise, it is better off than the reference card thanks to its better over-clock but when pitted against the ZOTAC card above, it's a tad behind. It's still a GTX 1080 Ti so you can easily game on 4K resolution with reckless abandon. There's another SKU from GIGABYTE, the Xtreme version with even better clock speeds, improved cooling and an additional year of warranty (as per the website). So we'd skip this one in favour of that.

Oppo F3 Plus

The best selfie phone

The Oppo F3 Plus claims to be the "Selfie expert" and it is indeed one. The phone offers two cameras at the front with one dedicated wide angle camera for group selfies or "groupfies". Having two cameras at the front allows the phone to shoot 'bokeh' selfies as well. The image quality is quite good and it captures most details. The colour saturation is decent and reasonably consistent across varied light situations. Image quality of the 8MP groupfie camera is as expected lower than the 16MP sensor, but it is still good.

The smartphone's photography strengths extend to the rear camera as well. The 16MP Sony IMX398 sensor at the back has the capability to shoot some really nice images in almost all lighting condi-

Price
₹30,990

tions. Images taken by the rear camera look sharp, with well-balanced colours and some visible noise.

The design is nothing new and the F3 Plus looks way too similar to most devices out there in the same price category. The build quality is good as well and so is the large 6-inch 1080p display.

Performance is handled by the Qualcomm Snapdragon 653 SoC, which does a decent job for the price, but still lacks the punch of the Snapdragon 821 powered OnePlus 3T. That being said, the 4000mAh battery provides enough juice to provide you 24 hours of usage.

Overall, The Oppo F3 Plus is the best selfie-centric smartphone we have tested so far. It performs well, has decent battery life, but a larger footprint may not suit everyone.
