

Future of monetization

Judging by Facebook's F8 conference, machine intelligence is the future of monetization. More here: <http://dgit.in/FBmonitize>

Games help the brain

Researchers have found that videogames can help keep you mentally healthy and help with overcoming addictions. <http://dgit.in/BrainG>

TP-Link WA-820RE Wi-Fi Range Extender

Portable and adjustable

The current crop of wireless extenders are quite bulky to begin with but the TP-Link WA-820RE has that problem solved. How? It runs off USB power and that too it's designed for a power envelope not exceeding 2.5W so you can use it with USB 2.0 ports as well. The installation is pretty easy and there's even an app available should you feel the need to migrate to a different network or kick unwanted leechers. After all, anyone who has physical access can make their way onto the network using WPS. And extenders aren't so easy to access post configuration so kicking unwanted users required a decent under-

₹1,379

standing of networking but with the app, it's easy. The unit is lightweight and has vents on the sides to help cool off but the LED can be a bit distracting with the lights out. Thankfully, the app has an option to turn that off as well.

We weren't expecting that good of a performance with the WA-820RE since it was built to run off of USB power but we were pleasantly surprised to see it work at par with those extenders that run off of AC main power. The catch here is that you have to stick with 2.4 GHz so bandwidth isn't great. It's a decent solution for setting up an ad-hoc extender absolutely anywhere since all you need is an accessible network nearby and a powerbank to get this started. Moreover, the foldable antenna helps with minor adjustments to get better reception. It may lack the 5 GHz band and have no ethernet ports but the unit is priced appropriately for the feature set.

Gionee A1

Good camera, but not the overall package

The Gionee A1 is the company's new flagship smartphone. The prime selling point with the A1 is the 16MP front-facing camera and it does produce good images. Although, skin tones are still softened to make faces look brighter, and sharp edges and coarse textures also produce softness to smoothen out blemishes.

The rear 13MP camera on the Gionee A1 is a fairly competent package as well. It uses a Sony IMX258 sensor, which produces vibrant colours and good dynamic range, along with fairly accurate white balance in daylight conditions.

The 5.5-inch AMOLED display adds to the pros of the device. Colours look fairly natural, and are not

as oversaturated as most AMOLED panels. In addition, Gionee's Amigo OS provides you with a colourful interface and bright icons as well as the iOS-like settings menu, which is fairly intuitive to use. The Gionee A1 is powered by a MediaTek Helio P10 SoC. The octa-core SoC is clocked at 2GHz and does a decent job in overall day-to-day performance, with most lightweight apps loading fairly smoothly. Gaming experience is a little inconsistent though.

The weakest link of the Gionee A1 however is the battery life, which lasts about a work day, but you do expect more from a battery this size.

Overall, the Gionee A1 is a decent smartphone that has a good display, offers acceptable performance for lightweight usage, and a very competent camera.
