(MUST READS)

ECHOES OF A BLACK HOLE

Frankfurt Institute for Advanced Studies' researcher Sabine Hossenfelder talks about the recent discovery of ripples in space-time and how it can herald the demise of Einstein's general relativity.

THE MERCURY EFFECT

Facebook hosted a murder. But for all the talk about content moderation, machine learning, and flag-monitoring algorithms, the problem isn't the platform, it's the people.

HOW ARISTOTLE CREATED THE COMPUTER

Today, Charles Babbage is considered to be the Father of Computers for his inventions and concept of analytical engines during the 19th century. But 2000 years ago, it was Aristotle and the philosophers he influenced that set the stage for the technological revolution that remade our world. <http://dgit.in/AristotlePC>

Bacteria are getting stronger

Scientists have been experimenting with superbugs for quite some time now. These tiny bodies, upon returning to earth from space were found harder to kill. Similarly, thanks to air pollution, disease-causing bacteria are showing greater resistance to antibiotics.

Bidding farewell to a space robot

Few weeks ago NASA released a short animation showing how their beloved probe will meet its end. The Cassini probe will soon plunge into Saturn, ending its 13-year long mission to the ringed planet and triggering a wave of grief among scientists, engineers, and an adoring public.

Hide your online tracks

Browsing histories are impossible to hide, well at least from your Internet Service Provider or the government. But what if someone told you that you can pollute your browsing history with fake traffic using an algorithm to make it harder for ISPs to spy on you? Find out more here:
