WITH A DIFFERENCE,
AND THAT DIFFERENCE
IS USUALLY ENOUGH TO
MAKE MOST NORMAL
PEOPLE GO "WTF?"

Alternative

JUST LIKE ALTERNATIVE FACTS, EXCEPT TRUE! This month: Why cats? Why aren't dogs the internet's favourite viral video animal? Can anything kill the smartphone? Wannacry? Yeah, us too. Plus, an interview with HP and of course, good old DGT to make you drool!

The Fidget Spinning Revolution

A new fad is sweeping across the world. You've probably all seen it – these tiny spinning devices have been exploding with popularity all over the Internet and it has (sort of) become an indispensable toy for every cool kid in school or even adults to fidget with.

Often marketed as a stress-relieving device and having dubious health benefits, a Fidget Spinner, generally made out of plastics or metal, is a palm-sized toy consisting of a bearing in the center that is supported by either two or three prongs that allow it to spin on your hand or any flat surface. These spinners have been around for some time now, but an interesting Google Trends results (<http://dgit.in/SpinFdgt>) for 'Fidget Spinners' show how they have suddenly peaked over the last two months.

Fidget Spinners are inexpensive and you can easily purchase one for as low as ₹200 on Amazon and eBay. But the interesting thing is, 95% of the fidgeters don't seem to care about its therapeutic functionality and for some reason, it has become that 'one gadget every kid wants/needs to have today'.

A banana phone. Seriously.

In a world of self-driving cars and Artificial Intelligence, someone is actually building a banana phone. Literally calling it the Banana Phone, this peculiar handset is not exactly a smartphone, but a smartphone accessory that wirelessly pairs with any Android or iOS smartphone using Bluetooth. Users can receive and make calls through the Banana phone when it is connected to their smartphones.

The company plans to route 1% of all sales of the Banana phone to their partner organisation, 'Gearing Up 4 Gorillas'. "G4G focuses 100% on the conservation of the rare mountain gorilla in Virunga National Park. The founders behind the Banana phone want to raise a total of \$30,000 on Indiegogo (<http://dgit.in/IndieBanana>), of which they have managed to collect \$20,000 approximately. For a limited offer of \$120, backers can get three Banana phones plus a sticker pack, a Banana phone T-shirt and chargers. A single Banana phone will set you back \$40 (₹2,583 approx).
