

Ransomware

IF YOU HAVEN'T HEARD OF RANSOMWARE THIS LAST MONTH, do send us pictures from whichever planet you're on. The Wannacry outbreak has ensured that the world is up and awake when it comes to cybersecurity. We've dedicated our first centerfold to throwing light on how ransomware has been affecting individuals and organisations since the last few years.

Number of systems affected worldwide by Wannacry > 220000 across 150 countries

1 out of 5 companies that paid the ransom never got their data back.

10

Every 10 seconds, an individual receives spam with ransomware.

A rising trend in the world of ransomware is

Ransomware as a service,

where interested cybercriminals can just pay a subscription or enrollment fee to the developers for access to ransomware tools.

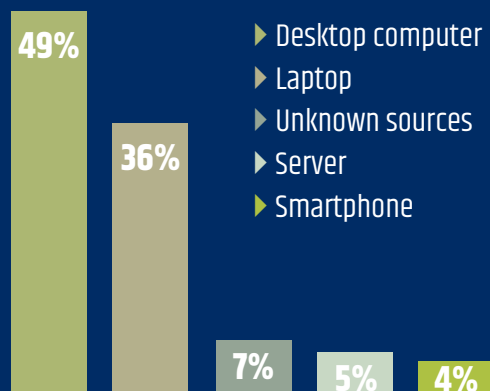

Bitcoin is the preferred mode of payment in almost every ransomware attack, due to the anonymity it offers.

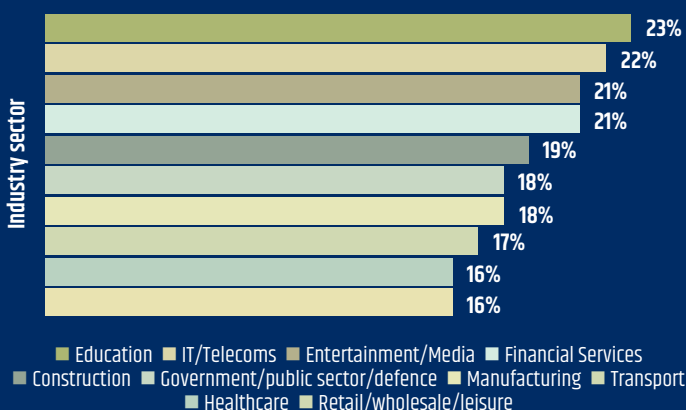

62

New ransomware families emerged in 2016

Physical locations in which ransomware entered the organisation

Industries and how they were affected by Ransomware

Germany

faced the least amount of attacks (18%) on organisations, but higher average ransoms (48% demands > \$10000)
