Loewe bild 9

Loewe is a German television brand known for making high-end televisions. They like making TVs that catch the eye. The Loewe bild 9 is no different. The bild 9 is inspired by the Bauhaus and Art Deco movements of the 1920s. Designed by the German-born Bodo Sperlein, the TV stands out like a piece of art in any room. One of the things that stand out about the bild 9 are its stands. No pun intended. The bild 9 has three positions to choose from. Standing, wall-mounted or table-mounted. The wires are hidden away behind the frame so you won't see a mess when the TV is mounted. The stands itself support the TV in a way that makes it appear to be floating. The bild 9's frames come in either gold or grey and the TV is accompanied by klang 9 wireless speakers. In terms of sound, the design of the speaker is as a soundbar with closed box design and passive base membranes. The display supports HDR10, Dolby Vision formats and Hybrid Log Gamma, so it's

right up there in terms of quality. The Loewe bild 9 will also have both 55-inch and 65-inch options. The 65-inch display sports a resolution (in pixels) of 3840 x 2160 (Ultra HD). It is expected to cost \$9000 (₹5,80,000/- approx) for the 55-inch variant and \$11,500 (₹7,50,000/- approx) for the 65-inch variant when it launches in August. All the options will be delivered with a back cover in graphite grey and Loewe assist system remote control, again in graphite grey, including batteries. Additionally it will have three USB ports and four HDMI ports.

Hysek Colossal Grande

Watchmaker Hysek is celebrating its 20th anniversary this year since its inception in 1997. They're known for making incredibly complicated high-end watches that are just mesmerising to look at. Their newest creation, the Colossal Grande Complication, is no different. The name is quite apt for this watch looks like a technical marvel. We've never seen a watch design quite like this one. You can actually see the insides of the watch, all the way to the back. Even the back panel is transparent - which makes it look breathtakingly beautiful. The watch boasts a whopping

1080 components which took three years to develop; each watch takes 240 hours to assemble. The Hysek Colossal Grande Complication will be available in only 18K rose gold and uses flat gears to display the time, rather than the conventional circular display. It displays time in the 24-hour format and also features a moon phase indicator in the centre. The moon phase indicator also doubles as a dual-time zone indicator. There's only going to be 8 of these watches and while the prices have not been confirmed, you can expect these masterpieces to cost around a whopping \$700,000 (₹4,54,19,500/-).
