

Targus USB Travel Dock

The Targus Travel Dock is a great tool to have on you if you're the travelling sort and need those extra connectivity options on hand at all times. It's about the size of a smartphone so it'll fit in your pocket or bag easily. In terms of features, it offers two USB 3.0 ports, along with two video ports, one VGA and the other HDMI for display. You've also got a Gigabit Ethernet port as well, making this dock quite useful for Notebook users, which are usually missing that ethernet port as a compromise for slimness. The dock itself is connected to your device of choice via an integrated USB cable which tucks into the dock nicely when it's not in use, so you don't have to worry about tangled cables. You've got the option to power it using a microUSB port as well. Definitely, a handy tool to have on you during your travels.

Price: ₹9,999/-

Neonode AirBar

Ahe Neonode AirBar is a small wand-like device that fits snugly below your laptop display and adds touch input to a non-touch laptop. The AirBar works on the simple principle of light interpolation. The whole bar projects infrared light over the surface of your display (when placed correctly). When you touch your non-touch display, the infrared light is interpolated where your finger meets the display, creating a point of contact, or the "touch point". In its current version, the bar supports two points of

touch. The whole thing becomes even simpler given the fact that you're not required to download any software or drivers. The AirBar is simply plug-and-play and the instructions on the box indicate that, saying, "Attach. Plug in. Touch". The bar has a 9.5-inch cable on the right side, which you need to connect to your laptop or PC. However, if you don't have a USB connector on the right side of your PC, or if your machine has USB type-C only, then you are out of luck.

Price: ₹4,700/- approx for the 13.3-inch variant

Blueair Classic 280i

We've been testing out many air purifiers and the ones offering Wi-Fi connectivity along with a companion app have always been appreciated. The Blueair Classic 280i is meant for room sizes of 280 sq. ft. It's capable of filtering out smoke, dust and pollen from the air inside your house. The smart panel on the top displays a lot of functions such as Wi-Fi connectivity, fan speed and filter status and the air quality of the room for PM2.5 and VOC levels. The most interesting feature in the 'i' models is the presence of an air quality sensor that speeds up the fans whenever it detects a drop in the air quality. We tested this out by blowing smoke near the purifier and it switched to the auto mode.

When the filter wears out, the Filter LED will indicate the need for a replacement. With all the features above and many that we've missed out, the Blueair 280i does justify its price considering the companion app and air quality sensor.
