

HP wants to go all guns blazing at the Indian gaming market

In conversation with **Ketan Patel** (Senior Director, Personal Systems, HP India), on how HP plans to target Indian gamers and capture the flag with its Omen series of gaming PCs

Soham Raninga | soham@digit.in

Q At macro level, how does HP see the Indian PC gaming space and how does HP's Omen lineup fit into it in terms of offering relevant products?

Patel: Gaming market in India is really exciting at this point, it's a country where 60% of population is youth and gaming is synonymous to youth. Indian PC gaming market is gaining huge traction with

almost 100% year on year growth. This is due to multiple factors. One of them being young people want to use PCs for gaming, entertainment, education and other multipurpose use cases whereas there are serious gamers who want a high performance gaming machine, thus PCs are the best choice for entry level gamers to serious gamers.

Q There are a few established players in the market, the likes of Asus, MSI, Dell and Lenovo with its upcoming Legion series in India. How does HP Omen plan to differentiate?

Patel: Our innovation engineers have been extremely focused to strategically garner various insights about the need of the gamers and based on those we have launched our Omen portfolio of devices. The varied range of Omen notebooks and desktops ensure that every necessity of a gamer is taken care of. The design is made keeping in mind both usability and attractiveness. We have ensured latest generation of processors, graphic cards and best in class thermal cooling to deliver power packed performance. These are the differentiators which makes HP a class apart. Our endeavor is to make sure to give end to end services with our top-notch devices.

Q Have you done any market research around Indian PC gamers and what they want? What kind of insights does HP have on Indian PC gamers?

Patel: We have done exhaustive research before launching the portfolio. We have made sure there are no compromises made with the performance of the machine which is always the top most priority of a gamer. The quality of graphics cards and processors used are best suited for the smoothest gaming experience. As a brand, HP has constantly believed in innovation and that's how much-needed features like thermal cooling have been added to the Omen notebooks and desktops to provide more endurance to the devices. Additionally, the machines have been designed in ways where they offer ample space to arrange the components easily. Apart from this, one of the best offering beyond the performance and looks is the flexibility of altering hardware configuration as per the needs of the gamer. There are various combinations of hardware that are listed on the HP Shopping portal and one can easily choose the products according to the configuration. This will give the desired flexibility to the consumers and gamers specifically.

Q Gaming laptops are now a lot more relevant, thanks to powerful graphics and processors along with high quality
