

Corrigendum 2

Baidu Root was included in our android rooting article last month. This was an oversight on our part. We apologise to our readers. For further explanation read the reply to the letter by Shivanand Pegu below.

New tools on Snapchat

With the latest update, Snapchat adds Limitless Snaps, Magic Eraser and new Loop tool. Here how to use them <http://digit.in/EraseSnap>

- CF Root
- Baidu Root
- Towel Root
- Kingo Root
- KingRoot

Out of these, CF Root, Towelroot, KingRoot are endorsed by the XDA admins as can be seen here: <http://digit.in/RootXDA>.

Given that the XDA admins are a better authority than us in the domain of rooting Android devices, we put our trust in their word. We understand that the individual developers might change things up and use advertising APIs that attempt to install bloatware or siphon off user data. This is true for any app on the app store and we assume our readers to be aware of the same. We should have mentioned this in the disclaimer clearly though.

As for Kingo Root: As you can see on the XDA forums (<http://digit.in/XDAForm>) where similar concerns were addressed

by the developers behind Kingo Root. They have provided a well-rounded explanation as to what all data is obtained by the app for the root process and for what reason. They even admitted that acquiring IMEI was an unnecessary process and promised to remove the same. This was back in 2013, and they lived up to that promise. Moreover, they have a Privacy Policy (<https://www.kingoapp.com/privacy.htm>) highlighting what all data is collected and if they sell any user data to third-parties. Finally, we're left with Baidu Root. This was an oversight on our part. We included it in our article since it was mentioned on a 5-star rated thread on XDA (<https://goo.gl/Xce719>). Apparently, you can no longer download this tool from the official source i.e. <http://baiduroot.net> which means our readers could be exposed to malicious apps and scripts if they download from an unver-

fied source. We will be taking immediate action to fix this and tender an apology and a correction in the next issue, and will also ensure that the online article doesn't have this error. Thank you for pointing it out to us and we're extremely grateful for readers such as yourself who take it upon themselves to help us improve.

—Mithun

 Hello there. 🤔 The Digit pack is like a Christmas gift for me. 😊 Everything is awesome and it has changed a lot since I started – from Agent 001 face cover issue. I buy Digit for the DVDs. 🤔 Here are some topics for Fast Track: Deep Web, bitcoin, freelancing, or whatever you like. BIG FAN. 😎

Letter of the Month

I have gone through the April 2017 issue. On going through the magazine, it is found that you have given importance to all type of matters such as mobile phones, cars, games, fossils etc., and come into the purview of a general magazine. If I prefer a general magazine, there are a lot of other magazines which are more useful than Digit at a lower price.

I expected a specialized magazine on computer science from you. It can contain certain subjects relating to information technology, robotics, etc.,. But you have diversified the knowledge base so that you will get more subscribers from various strata. At the same time you have gone on increasing the price.

So I am sorry to inform you that I do not prefer to subscribe such a magazine.

With regards,

S. Brijesh

Dear S. Brijesh,
I thank you for being a Digit reader in the past. Not every relationship continues forever, and I am happy that you were kind enough to give us some of your valuable time to tell us why.

Digit was never, and will never be a "computer science" magazine, and to be

honest, we've steered clear of being called that, or even portraying it. We are a technology magazine, a geek magazine, and we follow the trends wherever they go. Technology has not been just about computers for a very long time now. Although we are PC lovers, and consider ourselves part of the PC Master Race, we have to accept that technology has moved on, and it would be a disservice to our readers if we insisted on only sticking to PC technology in this day and age.

That said, we are certainly trying hard to ensure that we give our readers the information that keeps them geeky, and keeps them ahead of the rest of the pack. Digit is the secret sauce that gives our readers an edge over all of their peers when it comes to true knowledge of the diverse subjects that technology touches.

We will take your feedback very, very seriously, and will take it as a challenge to improve even more to ensure that we always justify even double the price tag that we charge.

Once again, thank you from the bottom of our hearts for your honest feedback and past patronage. We are who we are because of people like you who contributed to our success, in the past, today, as well as in the future. We are eternally grateful to all of our readers who make it possible for us to live this dream of being India's Technology

Navigator. We hope that one day you will sample Digit again in the future, and will find it to be worth your money then.

Thank you,
Sincerely

—Robert
