

Shifting landscapes

Research reveals Earth, Mars and Titan (all the worlds we've discovered so far) reveal history of shifting landscapes. <http://digit.in/shiftWorld>

Schiaparelli lander crashed

The Schiaparelli Mars lander that lost contact with the European Space Agency crashed due to a software glitch. <http://digit.in/SchiaparelliE>

Survey snippets

OVER THE LAST COUPLE OF MONTHS we ran a detailed survey asking for your thoughts and opinions. The survey has helped us a lot in planning this redesign and understanding the type of content you like. We wish to thank each and every one of you who took the survey. As a gesture of our appreciation we've picked a couple of random winners and published their responses below. The 8 of you will also get a surprise gift in your mail.

—TEAM DIGIT

Need more coding and tech development based articles. There are way too many product reviews. Now even the front pages have become review pages for flashy tech, which make you go wow for a sec but then you realise you learnt nothing from it.

—Akhil Ravipati

I would like to try e-magazine along with hard copy magazine only. You can host magazine at your server and users can download any issues if subscribed. The DVD looks like a waste for me. I am only interested in software on DVD, no GAMES at all :(

Host the DVD contents online and provide the access to subscribed users too. That'll avoid generating e-waste. Thanks to all of you for your hard work :)

—Ashoka

Awesome work guys.. keep it up
Hoping to get a Digit sub after my 12th exams

Kudos for this amazing magazine :D
Edit: This survey took a hell lot of time. Instead of ranking, you should have asked for rating. Anyways I can't hate you for this :P

—Vaibhav Kandwal

Please cover more budget oriented technology product reviews & technology stories related to products which may in future help in better day-to-day lifestyle.

Also like to see more in-depth software tutorials & tips-tricks & troubleshooting articles. Maybe a regular upcoming new coding language softwares etc.

—Jayavardanavel

I think Digit should have a separate magazine for coding and programming + software tutorials. The software on the DVDs should have tutorials along with them.

—Licknan47

About spending money on phone apps - there are probably very few people in India who do that. And only spent on steam games. Generally I wouldn't give surveys unless I'm being paid, but it's Digit - it's an exception. Improve the poster quality and try to give more posters in landscape mode. That is all. Keep on the good work.

—Anirudha Singh Thakur

I have been a subscriber of Digit since year 2000 (when it was Chip). I liked it grow the way it has grown. I like almost all the contents of the magazine except the gaming part but let it be there as most of the younger generation is into gaming. I know it is not a science magazine but still you could add articles on space science, astronomy, cars (technology) etc. I like the magazine and have no complaints.

—Prav Mathur

- Better your website. And then shift product reviews there. Not everybody is buying all the time, so don't fill the magazine with it.
- Regarding products, cover their technology. Their how and why. Go into details. Eg: what's sRGB, what does 1920X1080 actually mean, what's hyperthreading, why's i7 better than i3, etc.
- When covering games, do tell PC's minimum and recommended specs. Cover less of game details.
- Your cover stories are generally very good. Insightful. View counter-view on internet.org (if I remember correctly) was a great approach. Keep that up.
- Dmystify is a great effort too. Don't discontinue that.
