

**Justice League's new director**

Zack Snyder tells reporters that he is stepping down from directing the upcoming DC Justice League movie. <http://dgit.in/SnyderJL>

**Nürburgring's new record**

The NIO EP9 purely electric supercar set a new world record of 6.45 minutes around the Nürburgring Nordschleife. <http://dgit.in/NIOEP9r>

Startup Corner

We start off this new section with some of the most promising Indian startups out there.

Arnab Mukherjee | arnab@digit.in

I

It wasn't too long ago when India was considered mostly a service sector industry when it

came to technological innovation, especially information technology. Deemed good only for backend and BPO jobs, India was yet to realise its potential in innovation. Then the startup revolution happened in India. Fast forward to today, we are not only at par, but also leading the world in many aspects due to the numerous startups whose innovations are improving aspects of your life and the world of technology - starting from Artificial Intelligence to Home automation.

The motivation behind this section is to bring such startups to the forefront and show you what they are made of. This month, we start off with some of the most technologically innovative startups in the country.

**REALBOX**

Data analytics and offline are two terms that you don't often think of together. Realbox wants to change that by making data analytics, and its potential, available to brick and mortar stores as well. Their flagship product, Pulse, is an analytics dashboard that can be installed on most of the existing POS terminals in the market. Using this, the business can obtain

real time analytics and business summaries. For instance, a restaurant owner can keep track of the waiting time, the most popular F&B items, particular delays at particular tables and more such insights. The pricing starts off with a flat installation fees followed by a per-widget per-month plan or a fixed amount per month.

"Realbox is a data analytics company, driving sales for offline enterprises like PVR and Adidas by creating guest experiences."

SAURABH MOODY
FOUNDER & CEO, REALBOX

**GREYKERNEL**

Bringing VR into every Indian home, directly or otherwise, is what

GreyKernel wants to achieve. Their VR solution is compatible with most leading platforms required by a VR project. Founded by a team of four IIT Kharagpur Alumni, their primary project right now is to bring VR/AR to the learning process. The main USP of their platform - IRA VR - is the level of interactivity seen in the content. Alongside, content has been developed keeping in mind the user and their potential behaviour. Interestingly, GreyKernel also runs a VR community to bring VR developers and enthusiasts together. "We raised our seed fund (size and valuation can't be disclosed right now) in Nov'16" says Abhishek, "and have been running operationally profitable since then. We are looking forward to scale operations and planning to go for a Pre-Series A round (around 4 Mil USD) for the same."

**KLAR SYSTEMS**

Home automation is no longer an outlying field of technology in India, and we have startups like Klar Systems to
