

**Honor's new wearable**

Honor's new activity tracker, the Honor Band A2 features a 0.96inch OLED screen with a heart rate sensor. <http://dgit.in/HonorA2>

**S8's iris scanner fooled**

Samsung Galaxy S8's iris scanner which claims to be more secure fooled by hackers using photo and contact lens. <http://dgit.in/S8irisScam>

"We are a virtual reality and advance visualization start-up offering our VR/AR and Machine learning based products/solutions to organizations from different sectors."

ABHISHEK GUPTA
CO-FOUNDER AND CEO, GREYKERNEL

thank for that. Entirely bootstrapped, this startup believes that connected appliances, smart locks, voice control are just tip of the iceberg of home automation. Their main product is the zmote, a home automation hub that looks somewhat like a mini- fortune telling ball. This hub can connect with

all smart appliances and control them through a browser based interface. The USP of this hub lies in its compatibility and customisability in terms of usage - and it's priced at \$34.90 on their eBay store, which translates to roughly ₹2240/-. "There is tremendous innovation happening in the Home Automation segment," says Urmil Parikh, Co-Founder, Klar, "which will transform the way we interact with our homes. Our vision is to build a robust platform for connected devices and create an ecosystem around it that makes it easy for new devices to enter and work seamlessly with others, fulfilling individual as well as social objectives."

**NIKI.AI**

Niki.ai is one of the startups behind the rise of chatbots and chat boxes on many service oriented websites today. Putting into use the power of AI and Machine learning, Niki, the chat assistant, can do a ton of things like food ordering, laundry ordering, bus booking with simple, chat-based interactions. Essentially, if you feel like you're talking to a bot on an Indian website then it's likely that the chat is powered by Niki's SDK in India.

"We will be front runners, building lifestyle products that are useful, affordable, easy to use and unobtrusive."

URMIL PARIKH
CO-FOUNDER, KLAR SYSTEMS

"Think of it a one-stop app for your car to track and manage its security, health and performance from a tap on your phone!"

URMIL SHAH
CO-FOUNDER, CARNOT

"The algorithms behind Niki makes use of the most sophisticated of research in Artificial Intelligence, Natural Language Processing and Machine Learning."

SACHIN JAISWAL
FOUNDER, NIKI.AI

Sachin believes that right now, AI cannot solve every problem and it has a longer learning curve than a normal human. "However", he says, "once the system is perfected, machines have a much more error-free and efficient output than any human being."

CARNOT CARNOT

While connected cars often come at an additional premium, this Indian startup wants to bring connected features to every car out there - at least to all of the ones manufactured after 2008. Their offering comprises of a device, which you plug into the OBD-II port on your car, and pair it with the app to get a host of features in safety, car health and trip insights. For instance, apart from vehicle location, you can check fuel economy, battery health and more. Talking about their achievements, Urmil states, "We are looking to further our B2B tie-ups, beyond those with ICICI Lombard and Uber. We're winners of Qualcomm's Design in India challenge, as a part of which we've also developed a concept product for bikes." This startup is entirely funded by Sandeep Shah and Kunal Tandon and you can buy their product right now on Amazon for ₹5999.
