Playing around with Android O Beta

Google made several announcements at the I/O 2017 conference including a new developer preview for their upcoming Android O. As soon as the factory images went live and OTA delivery systems kicked in, we jumped straight into installing the preview on our phone. Here's a quick walkthrough on how you can do the same and try out the new features of the second developer preview and first public beta release of Android O.

01 DOWNLOADING ANDROID O BETA

Before installing the beta update, you have to verify whether your device is supported. Currently, the beta is supported by a handful of official Google devices. There are two ways to install Android O. You can download

Supported devices for Android O Developer Preview 2:

PIXEL
 PIXEL XL
 PIXEL C
 NEXUS 6P
 NEXUS 5X
 NEXUS PLAYER

the factory images from the Android O Developer portal (<http://dgit.in/AndroidOImg>) and flash them to your supported device. The other way is to enroll yourself into the beta program and receive the beta as an OTA update. We will go through both these steps one by one.

DESIGN DEVELOP DISTRIBUTE

Manually flashed system images do not receive OTA updates. Make sure to keep your environment up-to-date and enroll the device at any time to receive the next Preview update over-the-air.

Device	Download Link
Nexus 5X	bullhead-opp2.170420.019-factory-8daf3a02.zip
Nexus 6P	angler-opp2.170420.019-factory-4554918a.zip
Nexus Player	fugu-opp2.170420.019-factory-1708fa15.zip
Pixel C	ryu-opp2.170420.019-factory-1708fa15.zip
Pixel	sailfish-opp2.170420.019-factory-1708fa15.zip
Pixel XL	marlin-opp2.170420.019-factory-1708fa15.zip

Uninstalling the Preview

If you want to uninstall the preview from your device, you can do so by following these steps:

How does the Android O Beta Program work?

The Android Beta Program gives you an opportunity to try out pre-release versions of Android. Participants in the program will receive an over-the-air (OTA) update to the latest beta version of Android. As a part of this program are pre-release versions, and may contain errors and defects that will be fixed in future releases. The feedback you provide on the beta will help us identify and fix issues.

If you were previously enrolled in the Android N Beta Program, you must enroll again to receive the Android O Beta Program beyond the initial O release to preview future Android O maintenance updates. You will automatically get an OTA update to pre-release versions of the beta as they become available to receive regular public updates.

You may opt out of the program at any time to return to the stable version of Android. Enrolling in a beta version of Android, all user data on the device will be wiped.

Your eligible devices

Google Pixel

Currently enrolled in the beta program
