

Braava Jet mopping robot

The new iRobot Braava Jet mopping robot features app connectivity and replaceable cleaning pads. <http://dgit.in/braavaJet>

Smart goggles for insomnia

Startup Sana Health's new 'smart goggles' uses A/V stimulation to help patients suffering with insomnia. <http://dgit.in/SanaGoggles>

Teardown: Nintendo Switch

The Switch has seen a lot of craze since its launch. The innards paint a clear picture of why it's so popular.

Underclocked Tegra X1

The Switch runs at two different clock speeds in the docked and undocked mode. Rather than running at the Tegra X1's maximum possible clock speed of 1GHz, the Switch runs at 768MHz while docked whereas it runs at 307.2MHz when undocked.

Better battery life

The advantage of the underclocked SoC is not only better thermals that will give you better performance. Running at a lower clock speed, the Switch will run longer on a single charge - which is essential if you're using it on the go!

Child-safe game cartridges

In order to prevent kids from swallowing the game cartridges of the Nintendo Switch, the company has applied a non-toxic bittering agent called Denatonium Benzoate that tastes really, really bad.

Upgradeable storage

The 32GB NAND flash storage is modular enough to be upgradeable in the future, although there's no official statement from Nintendo.
