

Glucose tracking watch

Tim Cook was reportedly spotted wearing a glucose tracker that connects to the Apple Watch. <http://digit.in/GlucoseW>

Nintendo's share soar

Thanks to the booming sales of the new Switch, Nintendo's sales hit its highest point in seven years. <http://digit.in/SwitchShare>

Rendering at 720p

The native display resolution of the Switch is 1280x720 which means that everything on the screen will be rendered in 720p. Even though the Switch allows you to stream to a maximum resolution of 1080p to your TV, it will simply be an upscaled output from 720p.

Nintendo Switch with the left and right Joy-cons

Plastic display panel

The display screen is made of plastic and not glass, hence it would be susceptible to scratches when you carry it around in your pocket or backpack. There's also concern about the screen scratching while being connected to the dock. You could go for a cover or a carrying pouch.

Buggy Joy-con

There are a few hiccups in the connection between the Switch and the Joy-cons, especially the left one. Disruptions have been reported if the left Joy-con was completely covered by your hands while holding. It also requires to be pointed at the Switch while controlling.

Motion-depth IR camera

Probably the coolest feature on the Switch, the right Joy-con houses an IR motion camera that can detect the size of objects and distance from the object.
