

AI arm grabs like humans

The Dex-Net is an AI with a robotic arm that uses deep learning to figure out how to hold certain objects like humans. <http://dgit.in/DexNet>

Find jobs and get paid

Pickle is an app that connects people who are looking for simple jobs and those who willing to pay for those jobs. <http://dgit.in/PickleApp>

Xiaomi Redmi 4

Iterative but good

Iterative updates to its smart-phones are sure to catch up with Xiaomi eventually, but in the meanwhile, the company is doing quite well with it. The Redmi 4 is not an upgrade for Redmi 3s/3s Prime users, but it's a good phone to buy for entry-level buyers looking at new phones.

The major upgrade here is in terms of camera performance. Image quality is impressive for a budget camera, with good saturation levels allowing you to play around with filters without ruining photos. It's achilles heel is in low dynamic range, which limits the range of colours it can produce and reduces details in shadows. Overall, we would rank it as a top budget camera available in the market today. You can take good photos if you have enough time to shoot with this camera.

It's the same phone as before otherwise. The display produces warm and pleasant colours, with good saturation levels and deep blacks. Contrast levels are impressive and touch performance is smooth, with low latency.

Performance is also good. The Snapdragon 435 doesn't offer much noticeable improvements, but much like last time, this phone is smooth enough for a budget device. Battery life is also more or less the same.

There's a slight change in design, in the fact that the Redmi 4 is flatter. However, basic design language is once again the same as it was. Overall, the Redmi 4 is a good budget smartphone to buy.

The CG Slate Tablet is an infotainment cum education tablet for kids.

It is a Lenovo Tab3 7 tablet as the base device with a custom software (app) designed by Convegenius and a 64GB SD Card bundled with custom content specially created for kids. When inside the app, the tab gets a child-friendly UI with the added benefit of access control for parent profiles. That means if you are parent you can exit the "CG Slate for Kids" app and use the device like any other Android tab. The child profile is restricted to the app environment. On a fresh restart the tab will always boot into the kids app. On some occasions when we'd spam the home button or kill all apps it would work and let you wander about the underlying Android UI freely. Of course the "restrictive mode" would kick in and take you back to the CG Slate UI if you didn't enter parent pin (password). The content in the app is mapped to NCERT syllabus followed in the schools. It seems they have sourced (or licensed) content from a lot of sources like Mexus Education, Chipper Sage and makemegenius.com. Convegenius claims there are over 3500+ educational modules bundled via the device's memory card.

The tablet is good enough to keep your kids engaged with a good mix of fun and learning.
