

New Windows phone features

Although thought of as a dead OS today, Microsoft says new Windows Phone features are coming. <http://dgit.in/Winfeatures>

Honeybees are dying

A third of the honeybees in the United States were lost over the last year. Experts claim it will threaten food supplies. <http://dgit.in/RIPbees>

HP Z2 Mini G3 Workstation

Brawny and petite

The HP Z2 Mini G3 is a small mini PC designed specifically keeping design professionals, CAD engineers, video editors and other creative individuals in mind. Gone are the days when workstation PCs used to be giant towers, nowadays we see more and more powerful mini PCs entering the market. However, the fact that this mini PC has an Nvidia Quadro GPU is a big deal, and HP managed to throw in an Intel i7 6700 which allows it to run CAD, making it one of a kind. The HP Z2 Mini G3 brings this in a refreshing design and a form factor worth drooling over. Weighing just 2.04kg and contained in a 21.6cm square footprint, it'll take very little space. Moreover, it can be easily mounted behind a monitor using VESA mounts.

In this small PC, HP has packed in two USB 3.0 ports, one ethernet jack, two USB 3.1 Type-C ports capable of running displays and a whopping three DisplayPort 1.2. This means that this small PC can run five displays at once. There are more ports on the left side of the machine, including a couple of USB 3.0 ports (one for charging) and a headphone/mic combo.

Performance isn't bad either and you can definitely run the entire Adobe suite on the machine without major hiccups. Although, we reckon you can definitely build a faster, better PC in the same budget.

Although, if you don't want to go through a trouble of building a dedicated workstation and maintaining it afterwards, this is worth a shot.

—Hardik Singh

SPECIFICATIONS

PROCESSOR: Intel Core i7 6700 | RAM: 8GB | GPU: NVIDIA Quadro M620 2GB | STORAGE: 1TB Hitachi HDD | OS: Windows 10 Pro | I/O: 5 x USB 3.0, 2 x USB 3.1 Type-C, 3 x Displayport 1.2, 1 x Headphone/mic jack combo, LAN port

Oppo F3

Selfies, anyone?

The Oppo F3 Plus was the best selfie centric smartphone we tested this year and the Oppo F3 tries to imitate it. There is a similar 16MP + 8MP dual camera setup at the front for solo and group selfies respectively. With this setup, the F3 tends to shoot slightly oversaturated colours, whereas the colour captured by the F3 Plus are nearer to being neutral. However, quality of overall images, including details, dynamic range and depth of field, remains almost at par, with the F3 Plus edging ahead in some pictures. At the back, the Oppo F3 uses a tried and tested 13MP sensor, which takes good pictures for the most part.

The Oppo F3 is good looking, but not new. Same can be said about the display, which is a 1080p in-cell IPS panel, and while it is one of the best in the business, the colours are not as vibrant as the Gionee A1's AMOLED display.

The phone is powered by a MediaTek MT6750T SoC, which is paired with 4GB of RAM. Now, this setup works for the most part, but one notices occasional stutters and sluggishness. This became quite apparent when we tried gaming on the phone. However, the 3200mAh battery on the phone can keep up with even the heaviest users and would last a normal work day easily.

To sum it all, the Oppo F3 takes the best selfies of any phone under ₹20,000. However, it's not a very good overall performer. Consider it for selfies, but the Moto G5 Plus, Xiaomi Redmi Note 4 and the Coolpad Cool 1 are better overall performers.
