**W**

hen AMD announced the RX 580, no one expected an entirely

new architecture. In fact, we knew it was going to be the same Polaris architecture that had undergone refinement to enable higher clocks. It gives you higher performance but the moment you look at the power consumption, you know where it's coming from. We tested the PowerColor RX 580 Red Devil Golden Sample edition. The name is quite a mouthful but it's one of the better binned chips and sports much higher clocks. It's boost clock can go all the way up to 1425 MHz as compared to the stock RX 580's 1340 MHz. So not only are you getting an improved RX 480 but it's overclocked as well.

Taking up three slots is a bummer for a mid-range card and it comes with an additional 8-PIN connector as well. So we're looking at a cumulative ceiling of 225W. The dual-fan assembly sits atop a massive heatsink block that spans the entire breadth of the PCB covering the VRM as well as the GPU. We managed to get 83 FPS on Rise of the Tomb Raider and 4793 points in the 3DMark DirectX12 TimeSpy benchmark and the RX 480 reference card had scored 74 in RotTR and 4352 in TimeSpy. So we're looking at a 10 to 12 percent increment with the most decked out RX 580 which is quite good given that the price has been maintained for the RX 580. However, for the not so fortunate units which are clocked lower, the performance increment wouldn't be so high. So if you've got an RX 480 or a Fury then stay put but if you're three generations behind then look no further.

—Mithun Mohandas

### SPECIFICATIONS

RX 480 POLARIS | STREAM PROCESSORS: 2304 | TMUS: 144 | COMPUTE UNITS: 36 | BOOST CLOCK: 1425 MHz | VRAM: 8 GB GDDR5 | MEMORY CLOCK: 8 Gbps (8GB) | MEMORY BUS WIDTH: 256-bit | TDP: 150 W | POWER CONNECTORS: 1x 6-PIN + 1x 8-PIN

# CAT S60

## If Wolverine was a smartphone

**T**

he CAT S60 scoffs at the idea of protective covers. It is designed to

take on the world and remain standing. It is waterproof, drop proof, and boasts of a thermal imaging camera. But at ₹64,999 this ruggedness doesn't come cheap. The phone is obviously a niche product, meant for people who need such a device.

In many ways, the CAT S60 is the antithesis of the modern smartphone design. It's big, chunky, asymmetrical, and with a lot of physical buttons and switches.

The device is waterproof up to two meters, but flipping the Lockdown Switches to five meters lets you take the device down to such depths.

These switches shut off the speakers and the earpiece from water. The CAT S60's thermal imaging camera can detect heat signatures emitted by objects. There are different uses for the tech, for example, building contractor might use it to find any leaks along the AC vents in a building.

The CAT S60 comes with a 4.7-inch 720p display with good viewing angles. Colours and warm and contrast is fine. Sunlight visibility is good, which would make sense considering that the device is meant to be used outdoors in rugged conditions.

The device is powered by a Qualcomm's Snapdragon 617 platform with 3GB of RAM. Underpowered yes, but in everyday use, the phone seems fine. The phone sports a 3800mAh and should last you a day, which is about the industry average for phones today.

The CAT S60 is a niche phone and it does its job well.
