

23 Geeky Things

That geeks will love

Team Digit | feedback@digit.in

1 THERE'S ALWAYS XKCD

One of the internet's most favorite references is linking to an XKCD comic, that oddly enough, mostly ends up being weirdly relevant to the issue at hand. Incase you've been living under a rock since the dawn of the internet and don't know what on earth XKCD is: it's a webcomic created by an American artist Randall Munroe which usually consist of stick figures engaging in rather dry humoresque slice-of-life situations revolving around a particular idea. There are a lot of math and science references, a couple of jabs into popular culture as well as the occasional 4th wall break – perfect geek humor material. GEEKTIP! An XKCD is not just the image and the caption. Try hovering on a comic with your

MY HOBBY: TAKING ADVANTAGE OF THE FACT THAT SOME SPECIFIC DREAMS ARE WEIRDLY COMMON, BUT NOT EVERYONE WHO HAS THEM REALIZES THIS.

The secret behind the relevance

cursor next time ;-). And oh, if you were wondering, XKCD doesn't stand for anything. It's just random hard to pronounce letters thrown together. OR IS IT??

2 THE VPN GAUNTLET

As a geek, you obviously care about your privacy on the internet and your digital footprint unlike all the other sheeple who let companies spy on them and steal data to advertise better.

One of the best ways to achieve that is by using a VPN. It stops people from collecting data on the sites you visit and things you see and as a nice bonus, it also gets around them pesky geo restrictions. But choosing a VPN from the plethora of options available is quite a daunting task. And this is where That One Privacy Site comes in. It has a spreadsheet for almost all the VPNs out there, detailing whether a particular VPN complies with different security parameters with color codes. The creator, That One Privacy Guy (brilliant names, yes, we know) has sunk over 1,000 hours of work into this project and it shows. There aren't any rankings as such, to keep it unbiased and because everyone's need from a VPN are different. You have to make the choices yourself and find a VPN that has all the features you most care about even if it lacks in an area that you don't really care about. Truly the end-all place to pick a particular VPN.

3 "... CAN WE FIX IT? YES WE CAN!"

One of a geek's worst nightmares is his (or her) gear going kaputt. With it costing an arm and a leg to repair almost anything at
