

service centers today, many people just choose to buy a new device. All hail Consumerism! iFixIt has an easy to follow guide (With the all important pictures! How else are we supposed to know what a spudger is!?) to repair/replace pretty much any part of most common pieces of tech. And the best part is, you can buy the tools and the spares you need right off their guide! Their toolkits are a worthy addition to anyone's arsenal. Plus... it makes you look absolutely badass to have all those screwdrivers and stuff ;)

4 LEARN TO CURSE IN ELVISH

Where would we geeks be without our Klingon or Alienese. Yeah, that's a thing. In the realm of fully fleshed out fictional languages, not much stands out from the rest of the crowd as J.R.R. Tolkien's creations. "Quenya" which in Elvish means 'our language' (what else could it have been?) has its own script, dialects and even grammar. Tolkien took an awfully long time developing each and every aspect of his fictional world and it's pretty evident if you've read his works. So if you've been aching to learn another language to increase your nerd-cred then you'd perhaps want to try Quenya.

Credit: Lord of the Rings

Pfft ... It's Quenya, not Elvish

5 TRACK YOUR ANIME

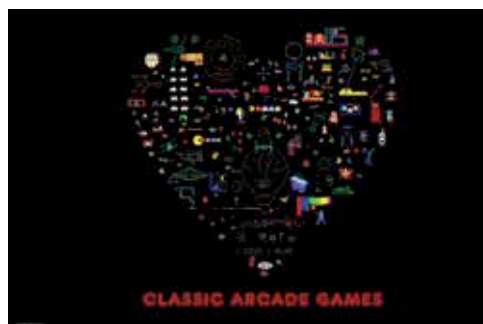

If you've caught onto the whole "Shingeki No Kyojin" scene then it's our sworn duty as members of the nerd brethren to inform you that there are much better Anime and Manga out there. And if you wanted a simple website that helps you track which all Anime/Manga you want to watch and when the next episode/issue is coming out, then MyAnimeList is a pretty neat place to track your favourite anime/manga, discover new ones and indulge in mindless frivolity that ensues when you put two nerds in the same room. Except, there are a lot more than two here.

6 MUSIC MAKES YOU LOSE CONTROL(LER)

Aren't you itching to get your 20 year old console back to life? To relive all those memories of days spent playing for hours at ends. However, you're all grown up now and have no time for all that. What if we told you there's a website that has curated the sound tracks from each and every 8-bit / 16-bit console that you know of and presented in a neat and clean interface? <http://vip.aersia.net/> may not have it all but it's well curated. Ever since we've discovered it, we've had it running in a tab hidden somewhere in the background. You've got tracks from classic games like Mario, Zelda, GoldenEye, ToeJam, etc. as well as from newer gamers like the Mass Effect series, Transistor, Bastion, C&C, etc.

Let the music never end

7 AI PLAYS MUSIC FOR YOU

Everyone, meet Gnod. Gnod is a 'self-adapting system' that'll try to pick out music you'd like, based off of three of your favorite bands or artists. It has a huge database on music tastes learnt from the thousands of people who used it, that it can use to predict what kinds of bands you will like based on the people whose 3 favorites were the same or similar to yours. Fair disclaimer, usually it just ends up suggesting music you already know (and probably like) but there are times where it can strike gold and give you a new earworm. Give it a try at www.gnoosic.com/.

8 SCREW GEO-BLOCKING

What do you say when a site prevents you from accessing it because you're from India? "Not today, mada..." (let's leave it there). Internet Censorship is a royal pain in the behind and while using a VPN may or may not open things up for you, we know that Proxy-Portal sure does. To be honest, some of the sites mentioned do fall into the legality gray area but most of them don't. If you were hunting for an
