19 OGLE HUBBLE'S BEST PHOTOS

The Hubble Space Telescope or HST produced some of the most stunning visuals of space that humankind has ever seen and these are the photos are which piqued public interest to spark better funding for an ailing, budget-cut NASA. Did you know that HST actually takes photos in black and white and colors have to be added in post production? Or that literally anyone can apply to use it? (Getting approved is a whole different ball game though. Very fierce competition) Here are 12 of the best shots HST has taken and boy, do they look good.

20 MEET THE GODS

The only reason you know that Odin is Thor's father is because you watched the Thor movies. But here's a fun fact. Loki isn't Thor's brother! Loki was in fact given birth to by an eight legged horse. And Heimdall was birthed by nine women (at the same time, not one after the other). The Norse pantheon has these twisted little mysteries and so do the other gods from the Egyptian and Greek pantheons. If you want to know more of such fun facts so that you can entertain yourself and others during movie intermissions, then you should certainly check out this series of illustrations.

21 CRUNCHYROLL

Well, if you're on Otaku, you probably already know of a couple of websites where you can easily watch all your favourite animes for free. Trust us, we

know them too. But think about this – Imagine you spend 10+ painstaking hours everyday scripting, drawing, animating, working and not getting paid for it all?

Our pick for the best website where you can watch all the latest anime 'legally' is Crunchyroll. They have one of the biggest collection of animes online. You can watch many of them for free and for the full access you can subscribe to their premium membership. The site also has a 14-day free trial, after which you can subscribe for \$6.95/month. The best thing about Crunchyroll however, is that all the latest anime episodes get aired at the same time as Japan!

22 NEVER BORED OF BOARD GAMES

What kind of lister would this be without mentioning at least one sub-reddit. Occasionally, us geeks like to take some time off from our never ending screen-staring and get a dose of the real life. We like to step out into the real world and take a few breaths of fresh air before running straight back in and breaking out our favourite pen-and-paper or board game. The fun in such games comes from having a few people to play with you, or in nerd parlance we call such games co-op. However, not everyone is going to share your interest in such esoteric board games. That's where this sub-reddit comes in. You can recruit people for your games or simply play multi-player DnD over Skype. And even discover a new game entirely.

23 POOR MAN'S ASTRONOMY

Not everyone can afford a fancy telescope with a high enough magnification to peer into the celestial depths. Which is why you have Google Sky, a Google Earth like service that charts out the skies except it's... for the sky... and not for earth. Purists would frown upon such an atrocious manner of engaging in the holy art of astronomy, but it's a great way to get started. Google Sky even has filters to help you see the infrared, microwave and even historical images of the night sky. Historical, in this context, doesn't mean the past positions of the celestial bodies but the old constellation charts that the likes of Galileo and Copernicus made use of.
