

coming soon, Google is going to stalk you and bombard you with creepily specific 'personalized' ads. What if we told you it doesn't have to be this way? What if there was an alternative? Enter the red pill: Duck Duck Go. The promise of absolute privacy it offers (and holds very tightly to) is a very compelling reason to switch. Having a large Digital Footprint becomes dangerous day by day, with hackers and identity thieves and other unsavoury characters and every little step you take to cut it down helps. DuckDuckGo doesn't track you and doesn't sell your history to advertisers. Plus it has tons of more customisability.

Mainstream: reddit

Geekier Alternative: redditP

Because: Who would have ever thought that Reddit would become mainstream in India? Granted most people on the street don't know what it is but as Digit readers, you already know India has a pretty active Redditor community. Here's where you need to set yourself apart. Instead of clicking through each post in an image or navigating the rather strange, frightening, unknown seas of Imgur (Did you know that imgur has an active community too?), just add a p after reddit in the url and refresh it. It'll automatically turn into a slideshow that you can customize to your liking, from fullscreen to changing the auto next timer. It's seriously a cool way to browse image heavy subreddits like /r/earthporn and /r/aww

Mainstream: Wolfram Alpha for Mathing (<https://www.wolframalpha.com>)

Geekier Alternative: Cymath (<https://www.cymath.com/>)

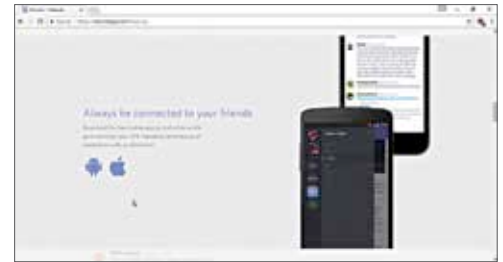

Because: If you have ever had to do a math assignment in the last few years, you probably know of Wolfram Alpha. For those who don't, it's basically a math search engine. Input your

math query and it does some hocus pocus in the backend and spits out the answer. Simple right? But there's no professor out there who's going dish out precious marks for just answers without the steps. Good thing Wolfram Alpha can show you the steps too, yeah? Tough luck, buttercup, it's behind a subscription paywall. But despair not, for Cymath is here. It does the same thing as Wolfram Alpha but the steps are free and it isn't as pushy when it asks you to sign up for its subscription. True, Wolfram Alpha has a few more nice to have features and costs a whopping 25 cents less a month but if you're just going to stick to the free program, Cymath all the way.

Mainstream: Teamspeak or god forbid, Skype for VOIP especially when gaming.

Geekier Alternative: Discord (<https://discordapp.com/>)

Because: Gaming together with some mates on comms is one of life's more easily obtainable pleasures. It might not really matter what software you use – be it in-game voice chat or a standalone offering (except Skype, it eats resources like crazy). But perhaps you'd prefer

Switch to Discord to spam your friends

a more discreet and private server that's also free. Or you'd like to merely text your friends without being on comms too. Or would like to stay connected on Mobile. If you found yourself saying yes to any of those, you should look into Discord (covered in SKOAR! few issues ago). It's a very light comms program that has unlimited free servers, is completely anonymous and easy to use. Instant Messaging is pretty neat too, with inline images and gifs. It can run as a web service too in your browser and actually has a pretty decent mobile app. Definitely worth making the switch with your fellow geeks!

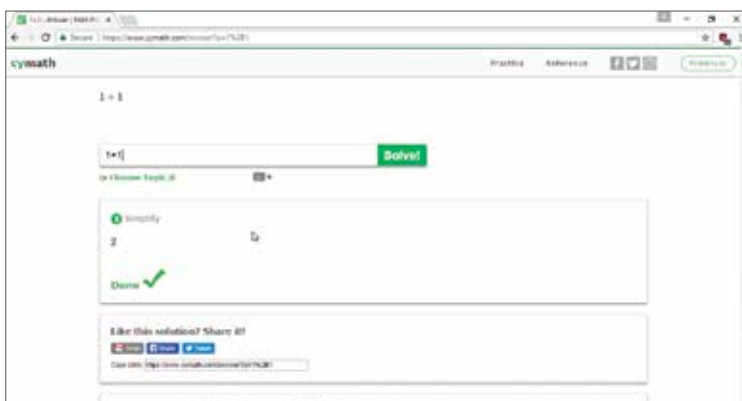

Mainstream: Wetransfer for sending attachments larger than 25 mb or just general file sharing (<https://wetransfer.com/>)

Geekier Alternative: Ge.tt or mixtape.moe

Because: Let's make this clear. Nothing turns

BONUS

Reddit Enhancement Suite is an extension every redditor must have. It allows you to tag users, save posts in it's own little place apart from reddit's, and personally, our favorite feature - Never Ending Reddit. It allows you to keep scrolling on and on and on and it's pretty wonderful. Oh and ultra secret geek tip: Try the Konami code after you install RES

Bye bye Wolfram
