Your guide to be an Indian geek

From the geek elites to the budding ones, this is for everyone

Abhijit Dey | abhijit@digit.in

H

aving read this month's cover story, we've hopefully been able to convince you that geeks aren't a

fringe group or a status which is unattainable. Popular culture has portrayed geeks as socially awkward beings and mostly associated them with computers and comic books. Now we all know the truth behind that and most of the geek myth-busting has been done in the first cover story. If you haven't checked it out yet, you definitely should. Although it takes into account geeks on a grander scale, how could we ignore the resident geek culture already existing around us? Yes, we are talking about the Indian or desi geeks who are always eager and enthusiastic about everything. On our quest to curate this guide, we scoured the internet and talked to a few geeks in order to make it easier for you to enter the geekhood.

JOIN TECH FORUMS

Your PC refuses to boot up. Who you gonna call? Your geeky computer friend. Speaking of geeks, they're always ready with solutions to even the most complicated problems. How do they do it? What's the secret sauce?

The answer is endless hours of reading through forums and also because they have probably faced those issues themselves. Whenever you face an issue, you should assume that someone has already faced the same issue and someone else has probably found the solution. This is usually the case unless you're using a new or exclusive piece of hardware or software.

Although you might have heard of popular forums like Overclock and Tom's Hardware, it's really difficult to come across solutions to region specific problems, essentially for India. But fret not, there are a favourable number of forums in India that caters to local issues. Forums such as Erodiv, Tech-Enclave and The Digit Forum (shameless plug) cover almost all aspects of technology and gadgets. You can find dedicated threads towards buying and selling advice, along with service and RMA issues. Coming over to smartphone related issues, you might come across dedicated threads for regions including India on the company's official forums. India Broadband Forum is a highly popular forum where you can search through and post your queries about your internet connection. Planning to start your own blog and have no idea where to begin? HellBound Bloggers is a serious forum for aspiring and existing bloggers who also have a closed group on Facebook. With the help of an emerging forum called

Indian Audiophile Forum, all your confusions about audio with definitions and buying queries can be easily posted and dealt with. Do you live and breathe video games? How about you spend some time at the Indian Video Gamer forum, interacting with fellow Indian gamers? Find links to all these forums below:

- Erodiv (erodiv.com/forums)
- India Broadband Forum (indiabroadband.net)
- Indian Video Gamer (indianvideogamer.com/forums)
- Headphone Zone (headphonezone.in/pages/the-indian-audiophile-forum)
- HellBound Bloggers (forum.hellboundbloggers.com)
- TechEnclave (techenclave.com/community)
- The Digit Forum (digit.in/forum)
