

Tragedy strikes Kalanick

Uber's CEO loses mother, father in serious condition in a boating accident. The family suffered a tragic event. <http://digit.in/kalanick>

BMW concept 8-series

BMW's latest concept reveals that the 19 year old 8-series is making a comeback with a modern redesign. <http://digit.in/BMWseries8>

PARTICIPATE IN PC BUILDING, MODDING AND OVERCLOCKING EVENTS

The master race isn't only about gaming but also about building PCs and pushing them to its limits. For some of us, it's kind of therapeutic to assemble a PC and spend our sweet time in cable management. Building your own PC requires a lot of patience and brainstorming in selecting the components. It's so vast, we wrote an entire Fast Track on it this month, and as a PC geek, you should give it a thorough read. You will find hundreds of resources and guides on how to build a PC but there aren't enough events out there to give you a first-hand experience of assembling them. But that is changing as we speak. This year we attended the Maker's Meet event in

Mumbai that brought PC enthusiasts in one place. The participants got to closely experience how PCs are modded into custom designs using professional tools. PC modding is picking up in the community where modders including Pramod Hambir, Rakesh Sharma, Sanjib Ray, Suvendu Mardi, Vinay Agrawal and several others are actively involved. They also got to compete in assembling a PC and check out how overclocking is done. Since a PC component based event can't really be complete without some gaming, they had organised a CS:GO competition as well. ASUS has been conducting several overclocking events around the country, and if playing around with the voltages of your CPU gets you high, you should definitely follow the OC Tour diligently.

GET INVOLVED WITH THE COSPLAY COMMUNITY

For the past few years, cosplay has picked up pace really well in the country. Where we got to see only a handful of cosplayers attending the first Comic Con, now we get to see hundreds of incredible enthusiasts spending months over building their costumes for that special event. While Comic Con has also expanded to more cities, a dedicated cosplay contest was also initiated by the organisers that go by the name Indian Championship of Cosplay (ICC). In its second edition now, this event witnessed success as more geeks got another platform to showcase their work. Other popular and local editions of cosplay events such as Anime Con, Cool Japan Festival and World Cosplay

Custom mod - Ferrari by Pramod Hambir for CM Case Mod 2017

Summit, have also been organised for a few years. Apart from dedicated cosplay events, gaming tournaments like DewArena, ESL India Premiership and India eSports Championship have also been hosting cosplay competitions where gamers get to make costumes of their favourite gaming characters.

The level of effort spent in making costumes and beefy props has risen through the years. We've come across complicated costumes with simple mechanical capabilities, LED lighting effects, and complex props carved to match every intricate detail of the original. Characters range from comic book superheroes to anime characters to protagonists from mov-
