

Paypal's logo war

Pandora's recent adoption of a new 'P' logo is unlawfully similar to Paypal's logo. Starts a trademark battle. <http://digit.in/logoPal>

The Arctic seed is flooded

The vault had to undergo some re-waterproofing after surprise flooding due to permafrost melting. <http://digit.in/ArcticRevamp>

FEATURE

ENROL INTO MAKER SPACES

Your interest in a certain subject can crop up quite early in your childhood. It could be anything, even things such as picking up a screwdriver and opening up the entire television set. With more of such bouts of opening things up (we mean electronic products), it's clear that you have a serious knack for discovering how things work or look from the inside. Your tinkering interest might have also evolved into building stuff with more exposure to toys such as LEGO sets, toy train sets, mechanical toys, etc. If you believe you still have the maker attitude, then you should definitely get yourself enrolled in maker spaces spread all across India. These maker spaces allow individuals or teams to come together under one roof, giving them access to high-end tools. Although the tools vary, you get access to equipment including 3D printers, woodworking tools, electronic tools, etc.

The maker space scene is rising in India where hundreds of geeks and tinkerers are collaborating to build and invent things. Some of the programs offer training courses before you can actually start messing around with the equipment. There are safety standards incorporated so that you don't end up cutting off your fingers while operating on the tools. The beautiful thing about maker spaces is that you have expensive equipment at your disposal to simply sit down and build your thing. It could be your passion project or a revolutionary idea

that you've always wanted to work on or something as trivial as wanting to play with the equipment as a hobbyist. They charge nominal fees through monthly memberships and also extra charges based on the tools you'd be using. This year we also attended the Maker Mela event where makers from all over the country got to showcase their creations. There are several maker spaces functioning in India and we've listed a few of them below:

- Collab House, Hyderabad (<http://collab.house>)
- Curiosity Gym, Mumbai (<http://curiositygym.com>)
- E4D Banjarapalya Bangalore (<https://www.fablabs.io/labs/bpalya>)
- Fab Lab - Kochi, Trivandrum (<http://fablabkerala.in>)
- IoT Labs, Bangalore (<http://bangalore-alpha-lab.in>)
- Jmoon labs, Delhi (<http://jmoonlabs.com>)
- Makerloft, Kolkata (<https://kolkatamaker.space>)
- Makers Asylum, Mumbai and Delhi (<https://www.makersasylum.com>)
- Meerut MakerSpace, Meerut (<http://www.meerutmakerspace.com>)
- National Innovation Foundation, Ahmedabad (<http://nif.org.in>)
- Potential Labs, Hyderabad (<https://potentiallabs.com>)
- Riidl Centre, Mumbai (<http://riidl.org>)
- Vigyan Ashram, Pune (<http://vigyanashram.com>)
- Workbench Projects, Bangalore (<https://www.workbenchprojects.com/home>)

Intimidating enough? Well, hopefully, we've given you enough material to spend the entire month lurking around the websites and gathering information about the mentioned communities. Maybe you'll even make this a lifestyle and impart it onto non-geeks around you. In that case, my friend, you're the true MVP.

If you love gadgets and technology, you should have already created accounts on the forums we talked about. PC building and overclocking gets you rolling? Keep your eyes peeled for events such as OC Tour and Maker's Meet. Always thought of attending Comic Con dressed as Han Solo? Get involved in the cosplay communities and seek help from professionals. Love fragging noobs and watching teams carry out insane clutches? Participate or attend the numerous gaming tournaments being organised around the country. As a student geek, entering inter-college competitions or simply attending the popular technical festivals organised by colleges is a great way to expose yourself to the latest innovations and technology. Love meeting fellow geeks and sharing your million

dollar idea? Start talking and head out to Quora and Reddit meetups. You must have been a builder all your life and want to take your inventing habit to the next level, maker spaces will provide all the tools you require. And most of all, stay tuned to Digit for your regular dose of geeking out, be it tech, science, culture or something completely alternative. So what are you waiting for? Go geek out.
