

Emma Watch by Microsoft

Microsoft's new Emma Watch is a wearable that can counter tremors induced by Parkinson's disease. <http://digit.in/EmmaWtch>

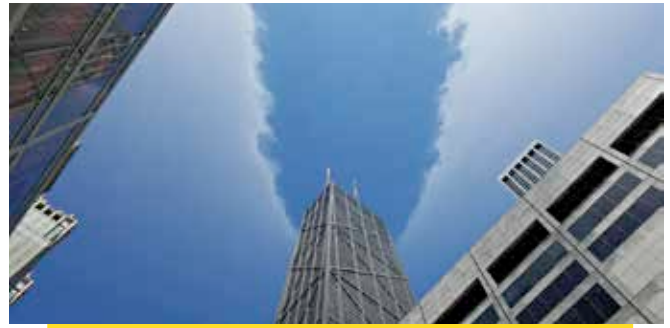

Finger scanning OLED

A new form of OLED micro-display technology can reportedly read "even of smallest sweat pores" <http://digit.in/fingerOLED>

A typewriter for writing music? Sure, why not! Exhibited at the 'Museu de la Tècnica de l'Empordà in Spain, this extremely rare music typewriter from 1936 was available in two different models - the original 14 keys version and an improved 33 key that was released 20 years later

The Etemenanki (often associated with the Tower of Babel) of the 6th century BCE was 300 ft tall, but humans and modern architecture have come a long way since then. In this picture, the John Hancock Center in Chicago appears to be cutting through the clouds.
