

**Most accurate video camera**

Researchers have made a video camera that can capture a staggering 5,000,000,000,000 frames/sec using lasers <http://dgit.in/over8000>

**Grass – the ultimate survivor**

Grass has the quintessential ability to respond faster to change and open its stomata wider which has ensured its survival <http://dgit.in/Grassrootz>

**Feedback for the
June 2017 issue of Digit**

Send your feedback at editor@Digit.in

You guys are amongst the few very important people in my life. I started reading Digit since the May 2014 issue. There's basically a "Before Digit", and an "After Digit" era in my life. You really changed the way I looked at technology. This year I bid goodbye to my school as I completed 12th and in our farewell, I was titled Mr. Computer (how cool is that!) all thanks to you. Here are my suggestions:

1. No Steam-based games in the DVD please. Why not executable setups instead?
2. Instead of listing them in SKOAR! give the Android apks instead. (Just the free ones)
3. Please improve the Digit App and at least give an e-version to the subscribers by asking the subscription number and some mode of verification.
4. The dmystifys are starting to get boring. I really loved "e=mc²", "string theory" and "dark matter". I expected more from "time", and "fossils" was just plain boring. They are the first thing I read when I get the package. Do a dmystify on Chaos Theory, I couldn't really understand it from the web.

–Sumeet Singh

As for including Steam games, that's not been the case since Feb. Since then we've been only bundling

standalone setups. About APK files, redistribution anywhere other than official app stores is illegal hence we can't include them. I shall try and make the dmystify books more interesting for you, and will try and squeeze Chaos Theory into our schedule.

–Robert

I am a reader of Digit from 2007 onwards. I have learnt a lot from your magazine since 2007 and even now I am learning from Digit. Digit keeps me updated about the latest news and arrivals on the electronics scene in general educates me in Electronics field.

I am shocked and appalled at the article "Origins of Indians" at Pg 119 of your June 2017 issue. An informative magazine such as yours has fallen prey to the decades old theories of so called origins of Indians that were created only to divide us rather than unite us as a nation. The reasons are as follows:

1. From where did you get the information that there were two groups – North Indian and South Indian and they could be differentiated based on colour complexion? Do you know these differences were invented by British Colonials to keep north and south part divided? 2. Do you know that it is accepted by most of the historians today that Max Mueller's conclusions about the Aryan Invasion theory was an utter fraud? 3. Do you know several papers

and researchers have concluded that British propaganda about Dravidian Origin has resulted in most of the political divisions, civil and military conflict in South India and Sri Lanka? Do you know that even British Historians have concluded that there is no difference between the Indus Valley Civilisation and settlements in other parts of India of the same time? How can you touch such a delicate topic without proper research? 4. Do you know that the so called concept of Toba Volcanic Eruption is also not accepted today?

I do not know if you have taken care to at least speak to a South Indian and find out whether your research is correct or not.

It is not right to play around with scientific concepts that hold great respect such as "genetics" and "mtDNA" which suggest that Indians were not native to our land but migrated from somewhere else. You guys being students of science are not expected to misuse the science over this delicate subject.

–R.Ravindran

(This Letter has been shortened to fit)

Wow. We seemed to have hit a nerve there. I assure you, we certainly did not mean the article in the way you're taking it. This was merely a short article that discusses the various theories that have existed about the Origin of us Indians. The idea is to whet your appetite so that readers read more about it. Let me reply point-by-point.

1. Absolutely in agreement here. Divide and rule was very much an evil British political ploy. You've mistaken our reporting of past understanding of the Indian origin story as fact. We have merely reported that for a long time it was thought to be this way.
2. Yes, we know this, and are very clear about this. I quote from our article: "However, new research has questioned this theory and asserts that 'there was no genetic influx 3,500 years ago.' Researchers state that Indians are not descendants of Aryans."
3. We have only said it's one of the many theories, which is backed by mtDNA evidence. It's not the only theory,
