Tech-love

THIS MONTH IN TECH: Things kick off with our coverage from the showfloor of Computex 2017, then we move on to an in-depth look at Intel's Mesh Architecture, and a list of amazing crowdfunded projects. Then we move on to our regular startup corner listing down cryptocurrency startups in India. As always, we have a wonderful roster of gadget reviews for you guys. Devworx deals with a neat guide to using Vim whereas you can also learn how to start mining Ethereum from this month's DIY story.

LG's transparent, flexible OLED display

This giant OLED display was developed by LG in collaboration with the Korean government, and the company beat Samsung to the punch to score a grant of \$110 Million from the Korean Trade Ministry. The challenge was to create a flexible UHD display, larger than 60-inches, to stay ahead of the competition curve, and LG seems to have done just that.

You have to give credit to LG who makes stunning looking OLED displays. The company has been aggressively ramping up its OLED production and the future of its panels certainly looks bright. Adding another feather to its cap, LG has introduced the world's first 77-inch OLED display, which is not only transparent, but is also flexible.

The display can be comfortably rolled up to a radius of 80 mm and is 40 percent transparent. At 77-inches, the display also supports 4K video output, which is quite impressive. Another advantage of the screen is that it can simply be rolled up for shipping. <http://dgit.in/LG77oled>

iOS 11 Public Beta for iPhone is here

Apple has started rolling out the public beta for iOS 11, the much awaited software update to the iOS operating system, with nifty new features like screen recording, Instant Wi-Fi sharing, FLAC playback, Siri updates and much more. A public Beta means users will not have to pay the \$99 developer fee to use the updated software. By installing the public beta of iOS 11, users will be able to get a glimpse of all the tweaks and new features planned for the final release of the software. Users can also send feedback to Apple about this pre-released version of iOS 11 by using the Feedback Assistant App.

Check out our complete guide on how to install the update, explore the new features and everything else you need to know, here > <http://dgit.in/iOS11new>
