

Computex 2017

Gaming laptops, insane CPUs, cabinets and more gadgetry from Computex, Taiwan.

AMD ThreadRipper

AMD's COMPUTEX 2017 press conference didn't turn out to be all that we'd hoped for but we now have tentative dates for the launch of the upcoming Ryzen 9 ThreadRipper processors which will ship with the new X399 platform. An exact date or price wasn't disclosed at the press conference but we were told that we should see the official launch of the ThreadRipper processors "later this summer". As we approach launch day, we'll have more details but this is what we know so far. The flagship AMD ThreadRipper will have 16-cores and 32-threads. Each and every ThreadRipper CPU will have 64 PCIe 3.0 lanes and will have support for quad-channel memory. You'll need a motherboard with the new X399 chipset to run them. The pricing details were not revealed but we expect AMD to price the SKUs below what Intel revealed with their Core X-series of processors. For all we know, by the time the ThreadRipper officially launches, it'll have more cores than 16 or 18.

MSI Infinite Series

Along with their extensive lineup of graphics cards and gaming laptops, MSI also showcased their latest gaming desktop called the Infinite series. The Infinite A is packed with the latest trends in gaming cabinets; RGB lighting and tempered glass panels. The cabinet also comes with HDMI passthroughs on the front panel. The hardware on the Infinite A was quite obvious; it packs MSI's own graphics cards, vertically, which is said to keep them cooler. As for the rest of the specs, there was no final word but we got to see the latest Intel Core i7 and i5 processors being used.

ASUS ZenBook Flip S

Being a convertible, the ASUS ZenBook Flip S has opted for a 13.3-inch display panel giving consumers not only sufficient working space but also keeping it small enough to be comfortable while in tablet mode. The hinges turn 360 degrees and don't seem to take up a massive footprint. The bezel, given the monicker of NanoEdge by ASUS, is 6.11 mm at its thinnest side which gives you an 80% screen-to-body ratio. The Flip S has an aluminium unibody design and to throw a few eyebrows up in the air, ASUS says they've used an aerospace-grade aluminium alloy (6013). They're claiming another world's first with the '0.3 mm' thick liquid-crystal-polymer fan. If that's true then it's just crazy thin. The hinge on the ASUS ZenBook Flip S is only 3.9 mm thick and has been reportedly tested for 20,000 open/close cycles. Lastly, the 10.9 mm z-height makes this the world's thinnest convertible notebook.

SPECIFICATIONS

CPU ▶ Intel Core i7-7500U | **Display** ▶ 13.3-inch 4K UHD (3840x2160) with touch | **RAM** ▶ 16 GB LPDDR3 2133 MHz | **Storage** ▶ 1 TB PCIe x4 SSD | **Battery** ▶ 38 Wh 2-cell Lithium Polymer with Fast-charge | **Ports** ▶ 2x USB 3.1 Gen 1 USB Type-C
