

## Cooler Master MasterCase H500P and Cosmos C700P

**C**ooler Master has been so busy with their MasterCase lineup of cabinets that they had completely forgotten a couple of their other popular lineups. While the company celebrated its 25th anniversary by releasing a special edition of their legendary Cosmos cabinet, they surprised everyone by showcasing a prototype of a new Cosmos and HAF cabinet at Computex this year. The special 25th anniversary edition didn't have much of an upgrade on the inside but it did consist of a bent tempered glass panel that looks gorgeous. The new Cosmos is still a work in progress since the name hasn't been finalised yet. We aren't sure whether it will be called the Cosmos III or Cosmos 7 but for now, they're calling it the Cosmos C700P for now. The modularity on this one is the best the company has ever made, where the cabinet can be completely dismantled to its barebones. It's about time that MasterCase went further with their modularity concept. It retains the iconic handlebars on the top as seen on the older Cosmos cabinets. The motherboard plate or tray can be inverted according to your needs and the location of different components can also be changed within. Speaking of the HAF or High-Air Flow series, the new H500P consists of two massive 200mm RGB fans on the front acrylic glass panel. It also has a tempered glass side panel and you will be able to install your GPU vertically as well.

## Corsair K68

**T**he Corsair K68 uses Cherry MX Red mechanical key switches, along with a per-key silicone rubber shield for dust and water resistance. This enables the keyboard to achieve a rating of IP32. The keyboard has dedicated multimedia controls, allowing on-the-fly audio adjustment and simple customisations. Using the Corsair Utility Engine (CUE) software, per-key red LED dynamic backlighting is completely configurable, allowing gamers to choose from a wide-range of pre-set lighting effects or download hundreds of user-made profiles. CUE also allows any key to be remapped to any other command or complex multi-function macros, with in-depth Macro support. The rest of the bells and whistles seen on other Corsair mechanical keyboards such as dedicated keys for multimedia, brightness control and Windows lock, are included in the keyboard. Corsair K68 comes with an MRP of ₹12,599.

### SPECIFICATIONS

**Keyboard size** ▶ Standard size (104-key) | **Key switches** ▶ Cherry MX Red | **Keyboard backlighting** ▶ Red LED | **Polling rate** ▶ 1000 Hz (1ms) | **N-key rollover** ▶ 100% anti-ghosting and full key rollover | **Weight** ▶ 1.12 kg

## MSI GT75VR Titan

**W**hen we talk about gaming beasts, this is what we mean. The GT75VR Titan as rightfully the series has been named, yet again packs the best that can be cramped into a gaming laptop. You get three options for the GPU segment including a single GTX 1080 or single GTX 1070 or two GTX 1070 in SLI. This ensures your gaming experience isn't hampered at all by letting you play almost every game in ultra settings. On the GT75VR you will be able to overclock the Intel Core i7 7820HK CPU up to 4GHz. To further push the capability of the mighty laptop, the 17.3-inch 4K display has a 120Hz refresh rate that also supports HDR which is rare in gaming laptops. Another highlighted feature of the GT75VR Titan is the SteelSeries keyboard which is a mechanical keyboard with low-profile mechanical switches. The keyboard also has per-key RGB lighting that can be customised through software.
