

Winbot

One would agree that most of the cabinets at Computex were about tempered glass panels and RGB lighting, but In Win had something impressive in their arsenal to showcase. Following tradition, they displayed yet another futuristic cabinet that blew everyone's mind. Apart from incorporating the use of actual wood into cabinets, In Win displayed an orb-like custom mod that boasts of a powerful rig

inside along with voice and gesture control, called Winbot.

The design and shape is probably something you don't see everyday, and neither have we ever seen such an implementation. The spherical body is transparent that can be opened up to get access to the inner components. There are two cameras on the front, capable of taking photographs and detecting motion. It will be able to recognise facial features of users which could possibly be used to unlock the desktop. It can detect gestures as well, and depending on the hand you pull out, the cabinet rotates in the same direction. The cabinet can also be controlled by voice commands, and at the showfloor, the cabinet was being controlled by Amazon's Alexa. The same gestures mentioned above have been replicated as voice commands. Winbot was the work of Wei Zheng, a custom modder and a computer scientist, along with In Win.

SPECIFICATIONS

CPU ▶ Intel Core i7-7700K | **GPU** ▶ ROG STRIX GTX 1080 8G Gaming | **Motherboard** ▶ ROG STRIX Z270E Gaming | **RAM** ▶ G.SKILL Trident Z RGB | **Storage** ▶ G.SKILL Phoenix FTL SATA 3 240GB SSD | **Fans** ▶ Aurora | **PSU** ▶ In Win C 1250W | **Water Cooling** ▶ EK

Zotac ZBox PI225

Zotac had showcased several products from their GPU and mini-PC lineup, with the ZBox PI225 being the most interesting out of the lot. The PI225 is a tiny desktop computer powered by an Intel Celeron N3350 dual-core Apollo Lake processor. The quad-core processor packs an Intel 500 Gen 9 graphics chip that supports 4K video playback, 32GB of eMMC storage and 4GB of RAM. The PI225 is one of those devices that completely blow your mind owing to how they scale down in dimensions while maintaining considerably good performance. It almost the size of your palm and even smaller than a 2.5-inch hard drive. With dimensions of 95 x 60 x 8mm, it still manages

to squeeze in two USB 3.0 Type-C ports, a micro-USB power port and a microSDXC card reader. If you're wondering how would to connect this tiny beast to a display and peripherals, the USB ports can connect to external displays and peripherals. There's no news on pricing and availability yet.

ASUS ROG Zephyrus

The 15.6-inch ROG Zephyrus goes for a profile that is ultraslim, while incorporating the ROG-exclusive Active Aerodynamic System (AAS) for cooling. Along with a 120Hz panel supporting wide-view technology, it consists of a 100 percent sRGB colour gamut. The display also supports NVIDIA G-SYNC™ to ensure there aren't any frame drops.

The Zephyrus has a Blade-inspired design, resulting in a sleek profile that comes down to just 16.9mm at its thinnest point. When the Zephyrus is opened, a portion of the bottom of the chassis flexes to increase the airflow volume by 20 percent and further increase air circulation. ASUS Aura RGB lighting technology will allow dynamic and customisable lighting effects over the entire keyboard. The keyboard supports anti-ghosting technology and has a maximum n-key rollover of 30 keys. Zephyrus positions the touchpad to the right of the keyboard and also integrates a 10-key function that is easily activated by a hot key. When activated, a red backlight illuminates the functionality.

SPECIFICATIONS

Processor ▶ Intel Core i7-7700HQ | **Screen** ▶ 15.6" Full HD (1920 x 1080) wide-view panel with anti-glare | **Graphics** ▶ NVIDIA GeForce GTX 1080 | **Memory** ▶ DDR4 2400MHz (up to 24GB) | **Storage** ▶ M.2 PCIe x4 256/512GB/1TB SSD | **Ports** ▶ 1 x USB 3.1 Gen 2 Type-C™ with Thunderbolt™ 3, 4 x USB 3.1, 1 x HDMI 2.0, 1 x 3.5mm headphone and mic combo jack | **Battery** ▶ 4-cell, 50Wh | **Weight**: 2.2 kg (with battery)
