

Control freak Disney?

The booting of the directors of the Han Solo movie over creative differences suggests that Disney want total control. <http://digit.in/HandSoloSW>

Doctor Who Season 10 Finale

The 10th season of Doctor Who reaches its conclusion on July 1st with the episode titled 'The Doctor Falls'. <http://digit.in/WhothDoc>

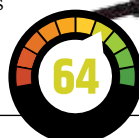

Corsair Scimitar Pro RGB

A new king for MOBA gamers

The Scimitar Pro RGB mouse scores the highest in features but loses out on build quality and performance in comparison to the competitors. Since it's directed towards MMO and MOBA gamers, sensor accuracy isn't really a priority. What matters the most is how beneficial the features are, and whether the mouse is comfortable. The Scimitar Pro RGB tops our list by ticking off almost every feature possible in a gaming mouse. The staggering number of macros is more than enough to assign actions and buy commands in Dota 2. It's comfortable for both the palm and claw grip style with medium hand

sizes (19 cm in length and 9.5 cm in width). The left and right clicks are durable enough to last for a few years while the entire body is sturdily built as well. The RGB goodness on the mouse is impressive with four different lighting zones, all controlled by the Corsair Utility Engine software.

The mouse is good for FPS games as well, we had a field day in CS:GO after we assigned smoke and flash-bang binds to the extra buttons. The sensor is good enough to aim accurately in CS:GO but the only issue was the heaviness of the mouse. Other than gaming, we assigned the buttons with commands such as copy, paste, undo, etc., and also frequently used special characters. If you spend more time playing MOBA games, spending such a high amount is completely justified. If you're more of a casual gamer only playing for fun, you should stick to keyboard binds. For competitive MMO/MOBA gamers, the Scimitar Pro RGB is a great choice.

—Abhijit Dey

MSI GT73VR 7RF Titan Pro

Laptop or desktop?

Everything is extreme about the MSI GT73VR 7RF Titan Pro. Whether we talk about the big and bulky design, the excessive weight, or the huge price tag of ₹3,34,990. The price, however, is totally justified by the hardware and performance of the machine. You get a superb 17.3-inch display with a 4K resolution and pretty accurate colour reproduction. The CPU on the machine is an overclockable Intel Core i7-7820HK, which is a beast whether you want to game or render videos on this machine. The 32GB of DDR4 RAM is more than ample and handles all tasks equally well. Same goes for the dual 512GB SSDs which work in RAID

On this machine. Besides all this, you also get a 1 TB HDD for any other content you might want to store.

Like the design and performance, the I/O leaves no room for complaints. The laptop is completely packed in terms of ports

as well. You get five USB 3.0 Type-A ports, Gigabit LAN, mini DisplayPort, Thunderbolt 3 via USB Type-C (USB 3.1 / Gen-2) and an HDMI-out 2.0 port. Then you have the full RGB keyboard made by SteelSeries, which is not as good as the mechanical one on the GT83, but is still quite good.

In conclusion, we think the MSI GT73VR 7RF Titan Pro is primarily meant for enthusiasts or hardcore gamers, who have the cash to spend for it.

—Hardik Singh
