

SCIENCE IS THE PATH
TO KNOWLEDGE, AND
FINDING OUT ABOUT
HOW OUR UNIVERSE
WORKS. YOU CAN'T BE
A GEEK AND NOT KNOW
YOUR SCIENCE!

Humanity Master Race

THIS TIME, GET READY TO FIND OUT SOME OF THE GEEKIEST secrets that science has to offer, starting off with the controversial area of Human-Animal hybrids. Moving on, let us show you how time travel has already been done (you heard that right), and in case you fell sick hearing that, we've got some health apps to cover that too. Also, by the way, planning to leave the planet anytime soon? Try Jupiter.

Colonising Mars over the next 100 years

Human beings have been envisioning life on Mars for many years, and colonising the red planet has been every space exploration agency's wet dream. India was the first to reach Mars on its maiden attempt with the Mangalyaan, US President Donald Trump wants NASA to put a man on Mars by 2033, scientists have also discovered evidence of water on the surface of Mars. And, somewhere in the middle of a worldwide race to reach and inhabit our closest planetary neighbour, Elon Musk has formulated a plan to transport a million human beings to Mars over the course of a Hundred years and 10,000 interplanetary voyages.

'Making Humans a Multi-Planetary Species' - This is the title for Musk's Mars plan, a detailed summary of his presenta-

tion at the 67th International Astronautical Congress, held in September last year. Musk's SpaceX is already planning a Moon trip for two in late 2018, and the company aims to make humans an interplanetary species to escape an eventual doomsday event on Earth which may occur "some day" in the future.

Cold Fusion, the future of power?

From being a long standing joke within the scientific community, Cold Fusion is finally being taken seriously. LENR (Low Energy Nuclear Reaction) a.k.a. Cold Fusion is a hypothetical nuclear fusion reaction that happens at near room temperature compared to traditional "hot" fusion reactions which require a high temperature and pressure. It promises to be clean, cheap and possibly a new limitless source of energy.

Early failed replication attempts led to the mainstream scientific community dismissing the experiment as a hoax. . Despite that, a small percentage of determined researchers continued to experiment on cold fusion.
