## Feedback for the July 2017 issue of Digit

Send your feedback at [editor@Digit.in](mailto:editor@Digit.in)

I am writing this mail to you to thank you guys for covering all these photography-related topics. The accompanying software on the DVD for editing were also appreciated. I loved Filmora and its tutorial, You guys are amazing and I've been a subscriber since the last three issues. I loved your coding based FastTrack this time. I also like the design of your issue very much. I have some suggestions for you:

- Can you cover coding and programming more?
- I want a FastTrack on AI, Android and Web Development. Would it be possible?

—Harsh Kathiriyi

As you can imagine we've already done FTs on AI, Android and Web Development before. Since you are a new subscriber, you probably didn't know that. Secret tip: your June issue DVD should have FTs to Android Studio and Building your own Website. For the others, just fill out a quick survey at <http://digit.in/dvdarch17umy>

—Arnab

Digit has undergone a lot of changes since I subscribed back in August 2015. The new layout is pretty kickass (but I did not like the Digit Diary section, the older one was better). I liked the integration of SKOAR! into the main magazine and the quality of videos on YouTube has

also improved a lot. However, there are too many videos – “first look” videos, then unboxing, then review video and whatnot. Perhaps you should do away with the unboxing videos?

Instead, you could do QnA videos and other stuff. I get bored watching so many smartphone videos. The website is, well... y'know...pretty bad by today's standards. You have conquered the offline platform but are still lagging behind on the online platform, which is pretty ironic (considering the fact that you are considered TECH GURUS).

I know this mail was full of criticism and it must be pretty difficult to execute all these tasks on time and run a magazine successfully. But you guys are the best that there can be.

P.S: I really liked the Time travel article in the July issue. I also liked the way memes are dropped in many articles.

—Omang Baheti

The point behind breaking down the overall content around a product into unboxing, reviews and comparisons is to keep the content diverse and have something available for every viewer out there. Many people love unboxing videos, especially people about to buy the product. For Q&A we do Facebook lives now, as it is meant for that kind of interaction. Like our various Facebook pages to be notified of lives. Rest assured, your criticism is

welcome and appreciated on all the points you've mentioned. As for the website, we actually have conquered the digital space as well, and it's India's leading tech website, but we will agree with you that it needs a facelift, which is exactly what's underway now. For now, you might find our geek site more to your taste: <http://geek.digit.in> – tell us what you think..

—Siddharth

I was going through the articles of July 2017 magazine. Instead of technology related topics (by that I mean about computers, laptops or all the electronic equipment) I see articles on games, biology, time travel, Jupiter and articles on cars. Thank god you haven't covered FOOD!

Do we really need these articles in a Technology magazine? When we have separate magazines for all such things, do you really need to mix this with your technology magazine? I'm very disappointed and worried as I have subscribed for one year starting this July 2017.

—Chaitanya Vangala

The biggest section by far in the magazine is the technology (Tech) section. We are certainly not wavering from that and most of the magazine is dedicated to exactly the things you want. However, based on our readership survey, we found that a lot of our readers wanted the kind of content that we put under Sci and Cult. Alt is admittedly our own doing, but it's a miniscule section anyway. We feel it is important for all of our readers to develop well-rounded and globally-aware opinions. Whether it's personal or professional relationships, we feel that everyone needs to widen their knowledge and interest areas to succeed on an increasingly competitive global battlefield. I'm happy to return your subscription cost from my own pocket, but we cannot stop your subscription. Why not wait a few months, we are sure you will find the content growing on you.

—Robert

This is going to be a long mail. I do hope you have the time to read it! I started reading Digit in class 9 (two years ago) in my school library. The
