Feet to Mile

Ever wondered why exactly 5,280 feet make 1 mile? Read about it here:
<http://digit.in/feettomile>

library has a big collection of books, but I found this magazine to be the most appealing. I used to read Digit and Skoar! Issues cover to cover. I did well in my class 10 (perfect 10 CGPA!), and on a recent visit to a railway station I saw a Digit issue in one of the bookstores. It had been 5 months since I had read a Digit issue, and it was your 16th anniversary issue. I bought the issue and it was great! Dmystify and Fastrack are great efforts from you, and the posters are so cool – especially Tekken 7 poster.

The cover of my dmystify was damaged, please don't use tape. I enjoyed reading all the books included in the set, and the content of the DVDs was also great. The wallpapers, the game trailers, the quantum physics lectures, the indie games, everything was awesome about the set. I liked it so much that I even subscribed to Digit and all the supplements and DVD with it for a year! I started the subscription from July, but I could not wait to get my hand on another Digit and enjoy it, so I ordered the April and May issues from the Digit store as well!

It does not really matter if you read this mail and publish it or not. What matters is that you guys at Team Digit are doing a tremendous job since 16 years. You have a great magazine! Keep up the great work! All the best for the future!

P.S. – I wanted to collect all the issues of this year. So, I ordered all of them from the store. But, I can't get the January issue, as it is out of stock. Can you help me?

–Ashutosh

d Congratulations on your 10 CGPA! It feels good to have a passionate reader like you back with us. We sure hope to keep you hooked for more than a year and make you renew your subscription for even longer! If you happen to run out of Digit issues to read from your haul, just go to <http://digit.in/dvdarch17umy> and fill out a quick survey to get access to our entire archive as PDFs

–Abhijit

 I am a 15 year old from Delhi. I was introduced to Digit by my father in 2007 (do the math!). You could say that it runs in the family. Thanks to you, all my

friends and family know me as the one guy who can do magic with computers (aka computer wiz kid). I have a few suggestions: Bring back the “How Digit Unwinds” section. I really loved the memes and video links. Also add a section based on pop culture – DC vs Marvel, Friends vs The Big Bang Theory, Comedy Central vs Colours Infinity and Star Wars vs Star Trek, etc. I will be your faithful reader until the day of DOOM (nice Reevu of that one btw). Gtg, bye!

–Shaurya Singh

d Phew! At least someone cares about what the Digit team does in its (imaginary) free time! We have reworked all of that into the new Diary section. Also, the new design includes a culture (Cult) section that is pretty much about everything you mentioned and a lot more. Get your hands on our June and July issues, and stay hooked to future issues for all your favourite culture content. Also, do check out geek site that features new and geeky culture content regularly at <http://geek.digit.in> and let us know what you think.

–Manish

Letter of the Month

I have been a reader of Digit for 8 months and needless to say that the issue this time was enough to make me a lifelong fan. I love your work and how precisely every topic is touched. Even a housewife like me, who has an interest in technology, is able to follow it. It's because of you that after 8 years of being homemaker and a mother, a fire in me has been ignited to pursue a career in IT.

I just have one suggestion: Reduce the typographical errors, it ruins the reading experience.

And two wishes: First, I would love to see a FastTrack on VMware. Stuff like how it functions and what are the possibilities with it could be covered. Second, it would be great to see an article which mentions legible work from home options for women like me who have attained computer skills and now cannot figure out what to do with them.

Even if these wishes cannot be fulfilled I will still be a great fan, because your work is like a Bible for me. I cherish every moment spent with Digit.

Whenever a new issue arrives, everybody in my house is warned that now it will be my Digit until I finish reading it.

While writing it I just thought of a third wish (Sorry for being greedy). I actually want some information on dual-booting Redhat Linux, and a guide for Beginners to working in Linux. There are so many things on the Internet that I am confused which one to follow. If you can share a good resource I will be really thankful to you.

–Kavita JM

Thanks for your words of encouragement Kavita, and we hope you are successful in finding a way to put your skills to good use. Firstly, we promise to try and drastically reduce the typos and language errors. As for your wishes, we've done a Fast Track on VMware (or Virtualization) a long time ago. You should definitely start with that. You can get access to the archives by going to <http://digit.in/dvdarch17umy> and filling out the form. For your Linux wish

you can check out the Oct 2014 Fast Track (also in the archives) on getting reacquainted with Linux. It should help you get started. We will look into an updated feature on opportunities to work from home.

–Siddharth
